THE NEW INTERNATIONAL WEBSTER'S COMPREHENSIVE DICTIONARY OF THE ENGLISH LANGUAGE

ENCYCLOPEDIC EDITION

Handsomely bound, **The New International Webster's Comprehensive Dictionary of the English Language** is a complete 1946-page, quick reference library. It provides the benefits of a large comprehensive dictionary with over 175,000 entries, 2000 illustrations, and specialized reference information to be found in the **Encyclopedic Supplements.**

The main **Encyclopedic Dictionary** gives you more than the expected spelling, pronunciation, and definition of words. It is an authoritative source of in-depth definitions, etymologies, pronunciation, and up-to-date usage, with cross-referencing, synonyms, antonyms and homonyms.

Further specialized reference information is to be found in the **Encyclopedic Supplements** which will enhance your understanding of the English language, eliminating the need for separate reference materials. You will find a **Dictionary of Common Abbreviations,** a **Spelling** and **Quotations Dictionary,** plus a **Grammar and Usage Handbook.** The tables of metric conversion will enable you to convert common measurements to metric measurements easily and quickly.

Introduction

The New International Webster's Comprehensive Dictionary is the latest in a long and distinguished series. It is backed by three quarters of a century of experience in dictionary-making and, like its predecessors, is designed to serve the practical and professional needs of all who speak or use the English language. No resource of lexicographical skill has been spared to fulfill this purpose.

Throughout their work, the editors, with the valued cooperation of many of the nation's eminent leaders in education, industry, the arts, sciences, and professions, have been guided by the following objectives:

TO PRESENT the fundamental facts and characteristics of the language accurately, fully, and interestingly. The definitions, and the wealth of additional material here presented, are the result of years of scholarly research into the many facets of word-meaning and usage, combined with an editorial awareness of the wide-ranging developments of our expanding world. Details of syllabication, spelling, pronunciation, morphological forms, and grammatical usage have been included without stint. Etymologies, or short word-histories, are provided for the interesting insight they give into the richness and versatility of the English vocabulary. Particular attention is given to the word builders — the indispensable prefixes, suffixes, and combining forms in which English is so rich and which are constantly at work supplying new words to the language. An innovation in dictionary practice — the inclusion of hundreds of homophones and collateral adjectives under their appropriate entries — has been effected to highlight two of the more interesting and valuable, but seldom considered, features of the language.

TO PRESENT adequately the significant contributions to English made in the United States, with requisite definitions, usage notes, and discriminative comment. Similar treatment is accorded to such areas of speech as slang, dialects, colloquialisms, and various forms of English as modified or influenced by Scottish, Irish, Canadian, Australian, and other sources — all of these being properly labeled for ready identification.

TO SECURE the widest possible coverage of both the established word stock of English and of the rapidly expanding vocabularies of the arts, sciences, trades, and professions. In the first group, selection has depended upon the overriding factors of usage, word-frequency counts, and sound historical judgment, reinforced by the consensus of the many authorities consulted in the course of preparation. In the second, choice of entries has been determined by a conscientious and extensive review of the appropriate sources in every technical field.

These, then, have been the major, but by no means the only, objectives of the editors and their many specialist consultants. A fuller discussion of the what, how, why, and wherefore of the contents of this book is given in the following pages of the Introduction and in the Explanatory Notes at page xvi.

Definition & Semantic Change

DEFINITIONS in this dictionary are adapted to the nature of the word. Any effort to tailor all words to fit a rigid pattern of definition would result in distortion rather than clarification of meaning. Instead of following a standard formula for defining, the editors have constantly kept in mind the need to study the meanings of words in phrases, compounds, and sentences and the processes of meaning-change which words have undergone and are still undergoing. This semantic approach enables the definer to stress variety rather than uniformity. It leads to a frank acceptance of the policy of different techniques of defining for different types of words. Our basic aim has been to formulate a definition that can substitute for the word itself in the context in which the user reads or hears it. The context, too, is often shown, in the form of illustrative phrases and sentences following many of the definitions. Pictures are used at points where a visual aid tells a fuller story about an object or process than words can.

Either the most relevant or the most general meaning is given first, depending on the sequence which will best convey to the user the interrelations between the various meanings of the entry. Historical order is not usually followed, for it is of more practical value to the user to start with the word as it is today. Where the current sense of a word is more meaningful in the light of its history, however, the original sense is given first. (Note, for example, the flow of semantic development in the entry **scapegoat** in the vocabulary section.)

A different approach in defining is needed for words that are far removed from concrete, picturable things, and that deal with concepts or abstract ideas of a complex nature. Terms dealing with theology, politics, economics, psychology, and sociology are often packed with different meanings for different people. It is desirable to give space and time coordinates, so that the meaning of the word at different times and places is thrown into strong relief; its various interpretations and applications are then more readily evident if the coverage is detailed and complete. Every user will thus find the particular reference he is looking for. For examples of the application of this pattern of defining, see the entries **dean** and **fusion.**

The user will often find in this, as in most dictionaries, definitions or parts of definitions that are introduced by such qualifying words as "specifically," "figuratively," "loosely," and the like. (See **disinterested, gale, seasoning.**) He will also find following others such limiting or warning signs after a colon as "in derogatory use," "a term of contempt," "a genteelism," or "used ironically." (See **smart** or **canicular.**) These added qualifying notes indicate that the word or phrase in question has acquired certain overtones of meaning that are conveyed either by the intonation of the voice, or by the habitual association of the word with a certain kind of situation. Its literal or primary meaning is thus specialized, bettered, worsened, or figuratively extended, as the case may be.

Specialization and Generalization Many words that now have very general meanings started life as the names of specific things. At one time the nineteen animals chiefly hunted

as game were each blessed with an individual term for the tail, but, as the general word *tail* came into vogue, most of these special names disappeared. The *brush* of the fox, however, still survives.

Often the processes of specialization and generalization of meaning work like a shuttle service. A word will shift from a specific to a general sense and then back again in the course of centuries of use. The word *gear,* for example, in early Middle English meant habits or manners. By 1500 it acquired a more generalized sense: property or equipment, comprising clothing, arms, armor, harness, or any tool or apparatus — a fairly comprehensive coverage. Then, with the increasing use of machinery in the Renaissance period, *gear* came to mean "an arrangement of fixed and moving parts in a machine for any special purpose." Finally, in modern mechanics, *gear* is now further specialized to mean "a wheel having teeth that fit into another wheel of the same kind, usually of a different size, to make the second wheel turn at a different speed from the first."

Radiation One of the most interesting ways in which words extend meaning is by radiation. In this case the word does not change its basic meaning, but it radiates out from this central core of meaning a variety of extended senses. Take the word *action,* for example. Its primary meaning is "doing." In an extended sense it may mean (1) an acting; a state of activity (*thought* vs. *action*), (2) the natural or usual motion of an organ (the *action* of the heart), (3) the movements of a mechanism (the valve *action* in an engine), (4) a thing done; a deed (the *actions* of a fool), (5) the sequence of events in a play, (6) a military or naval battle, (7) a legal proceeding (a court *action*), (8) attitude or position expressing some kind of emotion (the *action* of a painting). In all of these senses of *action,* the primary notion of "doing" is the underlying factor. According to dictionary convention, the meanings are given in sequence, but they may be envisaged as radiating from the central sense.

Transference This is another way in which words change meaning or enlarge in scope. It applies particularly to words involving feeling attitudes or value judgments. A kind of projection occurs whereby an emotion in the speaker is transferred to the objects or persons represented. If a poet speaks of "the cruel, crawling foam," a moment's reflection will tell us that the foam is not cruel, nor does it crawl. Rather, the speaker has projected his own very human feeling as to the cruelty of the sea, and imagines that the movement of the foam is an encroaching one. The attributing of human emotions and motivation to inanimate objects is an example of a semantic process whereby a word may be greatly extended in use.

Melioration and Deterioration Here are two additional processes by which words reflect attitudes either complimentary or contemptuous. For example, the social standing of a word seems to depend very closely on the status of the class, group, or profession which it describes. Since the rise of the city–state in ancient Greece and Rome, and the predominance of urban culture as the supposed center of civilization, words that have to do with the city usually have a favorable aura; thus the word *urbane* — a variant of *urban* — has to do not merely with a person who lives in a city, but one who supposedly has polish, manners, tact, and a pleasing manner. This process of elevation in the status of a word is called melioration.

In contrast, words associated with farming and the farmer have shown a tendency to come down in the world. Deterioration of meaning has set in again and again. To be sure, in any agrarian society where farming is the basic occupation, words associated with the lord of the manor, or even with a country squire who has sizable land holdings, usually give evidence of the high esteem with which landowners are held in the community. Serfs who worked on a villa or manorial estate in the late Roman Imperial period, or in the early Middle Ages, were described by the word *villanus* meaning "one attached to the villa or manor." Such a person was considered part of the property of the lord, and went with the villa when it was sold. When these "villeins," as they were called in early medieval France, went to visit in a nearby city, they were at once recognized as coming from the country. They often got into rows and quarrels, and were considered to have rough and uncouth manners. The name by which they were known was "villain" in Norman French, and the word passed into English, where it later acquired something close to its modern sense of a rascally person of evil intentions. Finally, the word took on the meaning of arch scoundrel, wicked opponent of the hero.

Genteelisms A genteelism constitutes a special case of deterioration. The word itself is a case in point, for genteelism originally meant the possession of qualities expected in well–bred and well–mannered persons, and was thus synonymous with gentility. But it went downhill as changing economic conditions made it increasingly difficult for many people in this group to maintain their standards of living. The novelists, noting the prevalence of "shabby genteel" characters in run-down urban areas and suburbs, associated them with an unsuccessful effort to maintain status, so that the word *genteelism* itself acquired rather a contemptuous or ironic flavor, as have *genteel* and *gentility.* (See these entries in the vocabulary section.)

Adulteration Adulteration of meaning occurs when a word is corrupted in sense by adroit manipulation of the context in which it appears, so that by association it takes on a flavor and feeling which subtly and gradually shift it from its primary sense. It can then be used as a clever weapon in propaganda in whatever direction the manipulator wants it to go. This fate has overtaken the word *semantics* itself. It is necessarily concerned with the processes of meaning shift, and the transition to a loose sense of "verbal shiftiness" or "verbal trickery" is one that is easily made. This process very nearly negates the proper meaning of the word and makes suspect the integrity and rigor of semantic analysis.

Euphemisms Polite substitutes for words that have an unpleasant or somehow embarrassing connotation are called euphemisms. Euphemistic replacement is, by its nature, a continual process, for the euphemism loses its power to conceal once it becomes too closely connected with the thing it represents. Thus, each age has its own euphemisms. The Victorian era is considered to have seen the height of verbal prudishness, and today we smile at conventions which made shocking such words as *leg* and *shirt* when used in the presence of ladies. With the reaction against Victorianism and the revolt against convention that marked the Jazz Age, blunt speaking became the fashion and the old euphemisms were rapidly discarded. Today, one finds in wide use words which would have been considered gross or obscene fifty years ago. The modern tendency is indeed toward the use of straightforward language, but the essence of the euphemistic process is still preserved in such commonly encountered substitutions as *rest–room, criminal assault,* and *social disease.*

Hyperbole The tendency to exaggeration in speech and writing has remained a constant throughout most periods of the language. Particularly has this been true of the United States, beginning with the time of the tall tale of the frontier. This tendency flourished richly in the field of slang, but it

was very far from being confined to that area. Some once strong adjectives have, in informal speech, lost most of their original potency (see the definitions labeled *Colloq.* under **awful** and **terrible**), and many adjectives of size, such as *colossal, gigantic,* and *mammoth,* have been considerably reduced in stature. The constant caution in the use of superlatives finally had its effect upon many of these terms, and today the understatement is esteemed in principle if not always in practice by American speakers and writers.

Figurative extension The use of a word in a figurative sense is perhaps the commonest way of extending meaning. When in the mid-thirties the study of allergies came into fashion in medicine, the adjective *allergic,* with a precise technical meaning, soon came into use in the sense of "adversely sensitive to," but it was picked up by around 1940 as at first a slang translation for "antipathetic." It became fashionable to say, "I'm allergic to crooners — or boring lectures" or any other pet aversion that the speaker harbored. This figurative sense is now accepted as having good colloquial standing.

This process has left many deposits in the language. The *flag* symbolizes the power of a country, just as the Roman *eagles,* the standard of the Roman legions, came to stand for the legions themselves, and by further extension, for the power of the Roman Empire. This type of figure of speech is called a metonomy, or sign for the thing signified. Next to metaphor, a comparison made without the use of the word *like* or *as,* it is one of the commonest devices for giving a figurative meaning to an individual word.

The process of adapting proper names — historical or mythological personification — for the purpose of describing qualities or conditions, is also a way in which new meaning is brought into play. One who admires himself inordinately is called a *Narcissus,* a man of great wisdom is a *Solomon,* one of prodigious strength is a *Hercules,* and a woman of great beauty is called a *Venus.*

The various methods used to extend the meanings of words exhibit the long poetic tradition of our language. Words are constantly acquiring new figurative senses, and the lexicographer must continually consider whether or not to add the new meanings to his treatment of the words in question. If the extended meaning is not self-evident, it must be supplied. The word *extrapolation* is a case in point. In the last ten years this mathematical term, which means extending a graph or table by projecting values beyond the point for which data are known, has acquired a quite natural figurative sense: projection of known scientific data into the realm of conjecture; in short, something close to legitimate scientific prophecy. The user of a dictionary, if he finds only the technical mathematical sense, may not be able to infer the figurative meaning in which he finds "extrapolation" in a magazine or newspaper. Here, and in many similar cases, the dictionary must include the figurative sense (see **extrapolation,** definition 2). Since this process has been going on in the language for nearly a millennium, constantly reinforcing and interplaying with the several other processes of meaning-change, it is not surprising that English is perhaps the richest of all languages in words with multiple meanings.

Usage Levels and Labels

IN THIS DICTIONARY the most important label is one that is not here. As the best style is the absence of it, so the "best" words in our language are those needing no label that make up general-purpose English. A writer who is a general practitioner will usually stick to this level of standard English.

Colloquialisms The words or phrases labeled *Colloq.* in this dictionary belong to the informal, comfortable language of everyday social life. The line between standard English and colloquial is hard to draw because expressions labeled *Colloq.* are usually understood just as well as if they were standard words, and the company they keep means that, unlike slang, they are in good repute among cultivated speakers. They would not be usable in full-dress, formal discourse but neither would they lower the tone to the level of slang.

Slang Slang consists either of words in themselves substandard and in bad repute or of standard words and phrases that are used in something less than a reputable sense. Slang may be highly colorful and bold, but very often it is derogatory or irreverent. As one of its basic characteristics is its daring newness, ninety-five percent of it is ephemeral.

Dialect The label *Dial.* (for *Dialectal*) in this dictionary indicates a word or usage that occurs in a local or regional dialect: a type of language that deviates from the standard language in vocabulary and often also in idiom, pronunciation, morphology, and syntactical construction. Sometimes words that are peculiar to a particular dialect are understood in other areas, but they are still felt as belonging to a distinctive type of local speech. A dialect that exists as an enclave within a country that uses an entirely different language is a *patois,* as, for example, the French Canadian spoken in Quebec, and its offshoot, the Cajun dialect of the descendants of the Acadians, who came down from Nova Scotia to Louisiana.

Americanisms American English came fully of age between the two World Wars and acquired its official chronicler in H. L. Mencken, who produced, in 1919, a book called *The American Language,* later much revised and supplemented. Initially, Mencken made too large claims for the American variety of English, basing his case for an American language on distinctive differences, and deemphasizing the total pattern of basic similarity between the language of this country and that of England. In this dictionary the label *U.S.* indicates words, phrases, and usages current in the United States and usually, though not always, originating here. In this way an attempt has been made to meet the needs of foreign users and those in other parts of the English-speaking world who want to be at home with American literature and its idioms. Often this has meant applying to the label *U.S.* the further label *Slang* or *Colloq.*

Briticisms The label *Brit.* (for *British*) in this dictionary denotes words, idioms, phrases, verb forms, and usages current in Great Britain (often also in other parts of the Commonwealth) but not in the United States. How it is that a monkey wrench is a *spanner* in England, a windshield is a *windscreen,* a baby carriage a *perambulator* ("pram"), suspenders *braces,* and a motor truck a *lorry*; and why a "close call" or "close shave" should be " a near thing" in British English, is anybody's guess. Sometimes the distinction between British and American usage involves a grammatical form. Such is the case with *gotten,* quite obsolete in standard British speech, but widely used in this country as a past participle of *get* when a completed action is expressed ("I've *gotten* much accomplished today").

Gotten is accordingly labeled *U.S.* in this book when it appears as one of the inflected forms in the entry **get,** and a short discussion of American and British usage is given under the main entry **gotten.**

Scottish There is a certain condescension in labeling words in Burns's poems and the novels of Sir Walter Scott by what is in effect a dialect label: *Scot.* (for *Scottish*). Such a label, however, is the fashion and it is used here with the note that the language of the Court of Scotland was in a sense merged with the Queen's English of Elizabeth I when the son of Mary Stuart, James VI of Scotland, became James I of England and launched the Authorized Version of the Bible known by his name.

Australian, Canadian, etc. In the overseas members of the Commonwealth new words have come into the English language just as they have in the United States. Local fauna and flora, the objects and processes peculiar to each area, have required new terms. In Australia, particularly, there have been additions in the way of riming slang, words from the language of the aborigines, and some modifications of British usage — the whole resulting in what may be properly called Australian English. To a lesser degree, Canadian English may also be differentiated. In all such cases, however, the departure from the English current in Great Britain is far less than in the case of the United States.

Archaic, Obsolete, Rare, or Poetic Words go out of fashion or fall into disuse, rapidly in the case of slang, at a more leisurely pace for cliches and informal words, while the jargons of pseudo-science, outmoded science, or mannered literary criticism decay more slowly, but none the less surely. When, therefore, an unusual word turns up in prose meant for the general reader, it is natural to ask about its status. If the word happens to be encased in a well-known quotation, it is likely to be labeled *Archaic* by the lexicographer. In "I'll make a ghost of him that lets me," the use of *let* in the sense of "hinder" is thus labeled *Archaic,* meaning that it is known and understood in our older literature, ranging from Elizabethan writing down through the works of Milton and Dryden but ordinarily not usable in present everyday writing or speaking. So in effect the label *Archaic* means "current from around 1500 until 1700," and hence turning up in quotations from that period but no longer used much, if at all, in writing subsequent to that stretch of about two hundred years.

Another group of words is labeled *Obs.* (for *Obsolete*). This is a more final verdict. It means that a word has gone so far out of use that it is quite forgotten. It has somehow failed to meet the test of survival, even to the extent of leading the somewhat ghostly life of an archaic word. Some such words died very early in the history of the language, failing to make their way from Old English to Middle English, and, while they had some slight and sporadic use in occasional writings, they did not really become established. One such word is *wanhope,* a native compound replaced by the Old French borrowing *despair*

The lexicographer also has to take into account a borderline area of words that, once current, are now in the process of becoming obsolete. The best solution in the way of a label for these waifs and strays is *Rare.* More often the dictionary must be content to say of such locutions "Formerly," or "In the early —th century," or some such phrasing which will indicate a definite period when the objects to which they referred were in active use, without labeling the word itself as obsolete — for often the word survives the object.

Lastly, there are the words that are closely associated with poetry — at least with traditional old-fashioned poetry — but which are felt as out of place in prose, even in that "other music of prose" which Landor described as producing a poetic effect without being avowedly poetic in form, diction, or outward aspect. The label *Poetic* is employed to suggest to the user of this dictionary that if he is writing traditional verse the word may do well enough, but that if he is writing prose discretion is indicated.

Field Labels An important part of the lexicographer's task is not only the correct defining of the words in a dictionary but also the assignment of many of the definitions to specific areas of knowledge. In a great many cases this can be done by so phrasing the definition that the reader can immediately see the bearing of the word in any one of a large number of special areas, ranging from Aeronautics and Architecture to Theology and Zoology. Where this procedure can be applied simply and without loss of clarity, it has been used in this dictionary; but, for the further assistance of both layman and specialist, some sixty special fields of knowledge have been represented by appropriate labels for the purpose of indicating that a term, or a particular sense of it, has a restricted or specialized meaning within the designated area.

Conspicuous in this group of labels are those that pertain to the sciences, in both their fundamental and applied aspects. It is here that the language is being expanded with hundreds of new terms or of new meanings attached to old, often venerable words. Such terms as *automation, cybernetics, motivation research, nucleonics, information theory,* and hundreds of others in the physical, biological, medical, and social sciences have been given particular attention in the preparation of this dictionary. The editors have utilized all dependable sources of information and checked their findings with those of carefully chosen authorities in specified fields.

Synonyms and Antonyms

Synonyms Full advantage is taken of the dual nature of the English language, by giving not only the long literary synonyms that derive mainly from classical and Romance sources but also the short, sinewy words which come into play with such force in speech, and which, aptly used in writing, make the discourse sound like a man speaking, not like a book. However, the user will not find in the synonymies in this work any undue stress on the notion, first given currency by Herbert Spencer, that the so-called Saxon element in the language should be favored over the classical, for many of the short, pithy, highly expressive words in the language are from Greek and Latin, either directly or through Romance channels. The view taken throughout in treating synonyms is that each member of a group of related words has equal validity and usefulness in its own context, regardless of its origin. The only criterion by which they have been considered is the suitability of the word to the context.

Thus, we might speak of a thief as having *stolen* a wallet, but a child *filches* candy from a store, and a soldier *pilfers* army supplies. Similarly, a valuable document is *purloined,* while funds are *embezzled.* Bandits may *rob* all whom they meet, but they *plunder* the countryside.

The synonymy under the entry for **steal** will enable the reader to see why the above distinctions were made and to judge for himself the extent to which the words can be interchanged without complete loss either of sense or of shading. A great many ample synonymies such as these will be found throughout the vocabulary section of this book.

Antonyms In further pursuit of a sharper sense of word meaning, the reader may then look at the antonyms, which are listed immediately following most synonym entries. Words that are opposed or contrasted in meaning furnish, oddly enough, a valuable extension of the definitions of the words involved. To be sure, it is definition by contraries, but teachers who understand the art of testing know that the surest proof of a student's knowledge of the meaning of a word is his ability to give its antonym.

As the synonymies show, a key word in English may have a dozen synonyms that approximate it or overlap with it in meaning; but there are few words that have more than one exact antonym, as *black* has *white*, and *wet* has *dry*. The juxtaposition of the synonyms and the antonyms for a given word makes it possible for the user to carry out for himself a further refinement of interpretation. The user can check whether the antonyms given negate one or more of the synonyms as well as the key word.

The Pronunciations

THE PRONUNCIATIONS in this dictionary have been compiled by editors trained in phonetics and acquainted with the facts of the spoken language. There is, however, no single authority on pronunciation in this country, and no standard dialect. In the case of major regional variations in speech, the editors have recorded first the patterns of pronunciation of the largest region, that of the great midwestern section that was formerly called "General American." Work on a linguistic atlas for the United States has indicated that the large speech areas are far from homogeneous, but the method of recording used in this book is suited to the purposes of a dictionary where the aim is to provide reference rather than extensive linguistic data. It is not intended, of course, that if you are in a speech community where words like *forest* and *orange* are pronounced with the vowel of *stop*, or where *four* and *explore* are pronounced with the vowel of *stone*, you are to change your speech pattern to that of the first pronunciation here recorded, that is (fôr′ist) and (fôr). It has not been possible or practicable to record the speech of all dialect areas in this country. (Not recorded, for example, is the speech of those parts of the country where *r* is not pronounced when in final or pre–consonantal position, as in *car, better,* and *part.*) You may not, then, find your particular dialect recorded, but your mode of speech, if it is normal for your area, is right for you.

There are, of course, other variations in pronunciation apart from those of regional speech patterns. Whether you say (ab′də·mən) or (ab·dō′mən), (ser′ə·brəl) or (sə·rē′brəl) is purely a matter of personal choice; both variants are recorded. It is sometimes impossible to determine the most frequent pronunciation in such cases, and a second or third variant shown is to be regarded as equally acceptable.

Although the words in a dictionary must be pronounced in isolation, the editors have attempted to record them as they would be uttered in the flow of speech. In accordance with this policy, the symbol (ə). called *schwa,* was borrowed from the International Phonetic Alphabet to record the unstressed neutral vowel heard in the first syllable of *about* and in the second syllables of *comma, barren,* and *lemon.*

Some variant pronunciations are restricted to particular fields or professions, such as the medical or military. These have been labeled in this book as follows:

ob·lique (ə·blēk′, *in military usage* ə·blīk′)

Foreign pronunciations, when pertinent, are duly recorded and labeled, although an established Anglicization is always shown first:

a·dieu (ə·dōō′, ə·dyōō′; *Fr.* à·dyœ′)

It sometimes occurs that a word will differ in its pronunciation depending on its use as a noun, verb, etc., or in some particular sense. The differing pronunciation is ordinarily shown immediately before the particular use or uses to which it applies, as follows:

> **en·sign** (en′sīn) *n.* **1** A distinguished flag or banner; especially, a national standard or naval flag. **2** (en′sən) In the U. S. Navy or Coast Guard, a commissioned officer of the lowest grade, ranking with a second lieutenant in the U. S. Army, Air Force, or Marine Corps.

The Key The system used for the recording of pronunciation in this book is one which has been determined to be the simplest, most meaningful, and accurate one for the purposes of dictionary transcription. It utilizes, with a few exceptions, the letters of the alphabet, combined with certain standard diacritical marks, such as the macron for the so–called "long vowels" (ā), (ē), (ī), (ō), (yōō). The conventional breve for the "short vowels" (a), (e), (i), (o), (u), has been eliminated from this key in all but one case, as these symbols are generally understood to be "short" when unmarked. The breve is retained in the one symbol (o͝o), the vowel in *book,* to avoid confusion with the vowel in *pool.* The elimination of the breve in all other cases, and the use of the one symbol (ə) for the unstressed neutral vowel however spelled, has resulted in a key for this dictionary in which only twelve characters, excluding the special symbols for foreign sounds, require special marking.

The Etymologies

THE ETYMOLOGIES in this dictionary present a concise history of the word with reference to origin, form changes, and semantic development. Native words that existed in the earliest period of the language are shown in their Old English form:

bedridden . . . [OE *bedrida* < *bed* bed + *rida* rider]

For borrowings, the immediate source is indicated first, followed by as many intermediate forms and languages as are necessary to show significant changes, and the word is then traced back to its earliest recorded forms or components in Latin, Greek, etc.:

diameter . . . [<OF *diametre* <L *diametrus* <Gk. *diametros* <*dia-* through + *metron* measure]

Where the ultimate language of origin cannot be determined, and the general provenance is known, a linguistic family is cited as the source:

garden . . . [<AF *gardin* <Gmc.]

or a geographical area is indicated:

banana . . . [<Sp. < native African name]

In the case of words of obscure origin, it has sometimes been possible to cite likely cognates in related languages:

gloat . . . [Cf. ON *glotta* grin]
groom . . . [ME *grom*. Cf. OF *gromet* a servant.]

Otherwise, such words are marked "origin uncertain" or "origin unknown," and the Middle English form is cited where one exists:

boy . . . [ME *boi*; origin unknown]

Of special interest to the student of words are the many other informative facts also given in the etymologies. Pairs or sets of words which have entered English through different intermediate languages or dialects, but can be traced back to the same ultimate source word, have been marked as "doublets." The etymologies of such words will show a common form, indicating the point at which the divergence of form and meaning first occurred and the necessary intermediate forms needed to show clearly the development of the modern words.

zero . . . [<F *zéro* <Ital. *zero* <Arabic *sifr*. Doublet of CIPHER.]
cipher . . . [<OF *cyfre* <Arabic *sifr*. Doublet of ZERO.]

A similar situation occurs when two or more words may be traced to the same primitive root; the divergence in meaning is much earlier than in the case of doublets, and so these words have no common recorded form. Such cognates are indicated by the phrase "Akin to . . .".

language . . . [<OF *langage* < *langue* tongue <L *lingua* tongue, language. Akin to TONGUE.]
tongue . . . [OE *tunge*. Akin to LANGUAGE.]

Another class of words may be derived from variants or different stems of the same recorded word in an ancient language, as Old English or Latin. This type of relationship is shown by the phrase "Related to . . ." in the etymologies.

hale^2 . . . [OE *hāl*. Related to WHOLE.]
whole . . . [OE (Northumbrian) *hol*, var. of *hāl*. Related to HALE^2.]

The use of numerous cross-references has made it possible to present a large amount of information in a small space and without unnecessary repetition. The etymologies of many compound words, such as *acrophobia, hydrophone, transoceanic* may be found under the main entries for each of their components, where complete histories are given: *acro-, -phobia*; *hydro-, -phone*; *trans-, -oceanic*. In other compound words where the identity of the components may be obscure, the break-down is made in the form of cross-references to the source of additional information.

morphology . . . [<MORPHO- + -LOGY]
azine . . . [<AZ- + -INE^2]

Etymologies of special interest, connecting words with important people, places, or events, are recorded with additional notes explaining the historic background of the word. (See **gerrymander, buncombe.**)

Many etymologies provide interesting insights into the cultural and social history of other times and places which still influence our thoughts and speech.

Usage

by Albert H. Marckwardt

Every society places its stamp of approval upon certain forms or modes of social behavior and looks askance upon deviations from them. In our culture, applause for a fine musical performance would be considered out of place at a church service, but entirely appropriate and in fact praiseworthy in a concert hall. The particular mode of behavior which is accorded such prestige may vary according to geography and social class. The English and European continentals recognize one manner of manipulating a knife and fork to convey food to the mouth; Americans employ a quite different technique. The American way seems needlessly awkward to the European; the European way seems crude to the Americans. When they entertain at dinner, upper middle-class Americans are likely to eat by candlelight and to have flowers on the table. This is regarded as ostentatious, or at best superfluous, in working-class circles.

The use of language is one of many kinds of social behavior. Here, as in other matters, certain forms of speech and writing have acquired prestige, whereas others are looked upon with disfavor. Moreover, differentiations on the basis of geography and social class are readily apparent. The past tense of the verb *eat (et)*, used by many speakers of British English of unquestioned social standing, would be considered rustic or uneducated by most Americans; conversely, the Americanism *donate* has not yet gained thorough acceptance in Britain. "Bring them crates over here," is a sentence calculated to produce cooperation and a speedy result when addressed to a group of factory workmen; the substitution of *those containers* in that particular social context would produce suspicion, resentment, and probably not the desired result.

Standard English

That form of the English language which has acquired prestige from its use by those educated persons who are carrying on the affairs of the English-speaking community (whether narrowly or broadly conceived) is known as Standard English. In short, the standard language is that which possesses social utility and social prestige. History bears out this observation with remarkable fidelity. All we know of the earliest stage of our language, that which we refer to as Old English, spoken on the island between the mid-fifth century incursions of Germanic-speaking Angles, Saxons, and Jutes and the mid-11th century Norman Conquest, was that there were decided regional differences, resulting in four major dialects. During the first two of these six centuries the center of power was clearly in the kingdom of Northumbria, and that dialect constituted

the standard. At the time of the powerful King Offa, political and cultural influence shifted southward, and the dialect of Mercia acquired prestige. From the mid-ninth century onward, the West Saxon dynasty assumed political leadership; King Alfred fathered a cultural renaissance and a major educational program; and this time the standard moved westward, remaining there through the period of religious reform, also centered in the same area. Thus it is that most of the Old English literature which has come down to us is in West Saxon. Even the early selections originally written in other dialects were finally recopied in the prestige dialect.

The development of the language during the Middle English period (1050–1475) bears out the same principle. By the time the English language had recovered from its temporary subjugation to Norman French, London was firmly established as the political, economic, and cultural center of the island. It is interesting to observe that by the end of the 14th century the dialect of London was used by many of the major literary figures irrespective of where they were born. Chaucer, a native Londoner, employed it in his poetry, which is possibly no surprise, but so too did Gower, born in Kent, and Wycliffe, who hailed from Lincolnshire. One acute observer has pointed out that Standard English had its origin in the kind of language employed in the courts of law and the governmental offices at Westminster, that it was essentially administrative English. This is another telling bit of evidence of the close relationship between the standard language and the bases of influence.

The emergence of the London dialect as a standard for the entire country first won formal recognition in Puttenham's *The Arte of English Poesie* (1589) in which the language of London and of the shires within a radius of sixty miles, "and not much beyond," was recommended as a model for aspiring writers to follow. This was accompanied by the statement that educated gentlemen in the outlying portions of England had adopted London English as a standard and were speaking it as well as people living in the capital.

It was just at this point in time that the English language entered on its worldwide career. It was transported first across the Atlantic to the American mainland and the Caribbean islands. The spread to the Asian subcontinent followed in the 18th century; to Australia and South Africa in the 19th. At the outset the colonies were generally willing and eager to follow the standard of the mother country, even though it was at times less than ideally suited to all aspects of the local situation, but as they acquired more and more independence, economic and cultural as well as political, new national forms of the language tended to emerge and to develop their own standard norms.

Today English is spoken as a native language by vast numbers of people—approximately 300,000,000—distributed over four continents of the globe. The standard reveals a considerable amount of variation from one country to another, and even in one part of some countries as compared with another. Thus, Standard West Indian English differs from both Standard British and Standard American English, and Standard South African differs from all of these. Standard Canadian English is distinct from Standard Australian. It is even possible to speak of standard forms of English in areas where it is not the native language, notably India and the Philippines. In the United Kingdom itself there is a standard form of Scots and a standard Northern English, both of which differ from the Received Standard of the London area.

The Role of the Dictionary

Ideally a dictionary is an accurate record of a language as it is employed by those who speak and write it. But as we have already seen, the English language, even in terms of just its present use, to say nothing of its past, exists on such a vast scale that no single work is likely to do justice to it in its entirety. Inevitably the task has had to be broken up into smaller segments. Some dictionaries deal with pronunciation only, at times even confined to a particular country—England or America. Others confine themselves to particular segments of the language: dialect, slang, or one or another technical vocabulary. More ambitious is the attempt by the historical dictionary to include within the bounds of a single work evidence of both the present and earlier stages of the language, although sometimes a dictionary may be confined to just one early period—Old or Middle English, for example. There are dictionaries which concentrate on the language as it is, and has been, used in England, in Scotland, in the United States, and in Canada. Consequently, in the face of this inescapable specialization and division of labor, a dictionary which purports to be general in its purpose must of necessity exercise a high degree of selective reporting on those aspects of the language which will best serve the needs of those who consult it.

The editors of this dictionary have assumed that it will be used principally in the United States, by persons who are familiar with American English. Only rarely have they felt it necessary to identify features of the language which are characteristic of this country. For example, the past participial form *gotten* is identified in a note as an American usage, and the peculiarly American use of *integrate* as used in "to integrate schools" bears the label *U.S.* The editors have taken on the responsibility of identifying usages peculiar to Britain, Canada, or Australia, indicating these with the appropriate label. Any item not so identified is in current use in the United States. In this connection it should be realized that despite all that has been said here about differences throughout the world, the unity of the English language in the many countries in which it is spoken far outweighs the diversity.

The obligation of the dictionary to record the state of the language or some segment of it as accurately as possible has already been mentioned. This may properly be termed a descriptive function, and it reflects the way in which the editors approach their task. But the nonprofessional, the layman who consults the dictionary, does so from other motives. Either he is seeking information on some particular facet of the language about which he knows nothing—the most obvious instance being the meaning of a word he has not previously encountered—or to discover which of several possible uses of the language, relative to spelling, pronunciation, word division, word meaning, or grammatical form, has acquired a sufficient degree of prestige and propriety to justify his employment of it. In short, his view of the dictionary function is essentially prescriptive. He hopes to be told what to say and to write, or more accurately perhaps, how to say and how to write.

In the light of all that has been said up to this point, these two concepts, the descriptive and the prescriptive, should not be in conflict with each other. It has already been pointed out that the standard language *is* the language of the socially and culturally dominant group within a speech community. There can be no other source upon which to base it. Accordingly, if the dictionary records that language accurately and faithfully, it should constitute a reliable guide and preceptor.

Unfortunately, the problem is not so simple as it seems on the surface. For a number of reasons too complicated to explain here, many people, Americans in particular, are reluctant to accept this simple and straightforward view of the matter. For one thing, experience has taught them that some persons of position and influence have little feeling for or command of the niceties of the language, and accordingly they are led to question the reliability and usefulness of an accurate exercise of the descriptive technique. Second, they are committed to a rigid and monolithic view of what constitutes the standard language and expect to find a single answer as to what is linguistically approved or appropriate, irrespective of the circumstances in which it may occur. The facts of the case are quite at variance with this assumption. Again, language like any form of social behavior varies in response to the demands of the particular social situation. Many of us would not hesitate to pick up a chicken drumstick with our fingers at a picnic but would feel constrained to use a knife and fork at a formal dinner. Neither form of behavior is superior or inferior to the other; it is a question of adaptation to the circumstances. Differences in regional standards prevail as well. In some parts of the country, for the host at a cocktail party to employ a bartender smacks of ostentation. whereas a hired caterer is accepted as the norm. Elsewhere just the reverse set of values prevails.

Varieties of Usage

It is precisely for this reason that dictionaries find it necessary to employ various kinds of labels to indicate the sphere of usage in which a particu-

lar word or expression is or is not acceptable. Those labels which are most often misunderstood have to do with the degree of formality which characterizes the communication. No dictionary has found it possible to recognize more than a dichotomy here, namely a formal and an informal type of speech. Clearly, each one of us in the course of a day's use of the language communicates much more in an informal manner than in a formal. The differences are pervasive, including pronunciation and structure as well as vocabulary. To take just a few obvious instances: the clipped form *dorm* is a frequent informal equivalent for *dormitory;* the phrase *all in* often serves for *exhausted, catch on* for *understand,* to cover at least three of the four major parts of speech. There is a whole battery of adverbs such as *consequently* and *accordingly* which may find *so* as their normal equivalent in less formal discourse. The same distinction extends to such phrase structures as *at all events* and *needless to say.* In the negative-interrogative form of the verb, *isn't he, can't he, won't he* are the informal expressions corresponding to *is he not, can he not, will he not,* a consideration affecting both syntax and pronunciation.

Actually we are faced with more than a dichotomy here. Some observers recognize at least four distinct linguistic styles, including the formal (*This is not the man whom we seek*), the consultative (*This is not the man we're looking for*), the casual (*He's not our man*) and the intimate (*'Fraid you picked a lemon*). It is beyond the bounds of practicality or serviceability for the dictionary to recognize more than two broad types of situation, the formal and the informal. Moreover, in terms of the expectations of most of the people who consult a dictionary, it is more to the point to label the justifiably informal than it would be to signalize the formal. Generally the length and stylistic aura of a word will identify it as being primarily confined to formal use.

Distinctions drawn on the basis of formality often cut across differences in the mode of communication, speech or writing. Much, but not all, of our speech activity in the course of a day is informal. Some of our writing at least is more likely to be formal, although many personal letters, memoranda, the private writing contained in diaries and journals, may well fall into the informal category.

The point is that these are matters of the function of language, not of acceptability or correctness. A person whose informal speech may be characterized as "talking like a book" or "talking as if he had swallowed the dictionary," has simply failed to sort out the styles properly. One may rest assured that whatever a dictionary labels as *informal* is not less correct than an unlabeled item but that it is appropriate to an informal situation or purpose. Dictionaries usually do not affix a label to those words appropriate only for formal use on the ground that the social penalties for excessive formality of speech, though very real, seem somehow less onerous than those for misplaced informality.

Slang

Somewhat akin to informality, but differing from it in several important respects, is the use of language we have come to call slang. Slang is difficult to define, partly because the term itself has changed in meaning over the centuries. Originally it referred to thieves' argot, and today the term is still applied to the special terminology of certain occupations and other groups, including oil drillers, baseball players, rock or jazz musicians, college students, shoe salesmen, tramps, drug addicts, and prison inmates, but it has also taken on a much broader application. It includes clipped forms like *benny* and *frag,* echoic terms like *slurp,* meaningless tag phrases of the class of *twenty-three skidoo* from the early years of the century, *so's your old man, and how, you better believe it,* all of which have had their fleeting currency, only to be replaced by what will undoubtedly be the equally temporary *got to* (*He's got to be the best ball player in the league*) and the interjection *Wow!* which appears to be the stock in trade of the younger generation and the mindless consumer pictured on television commercials.

Not included in the concept of slang are dialect, localisms, profanity, and the so-called four-letter words once taboo in polite society, now increasingly accepted. It is also important to recognize that most slang is colloquial in nature in that it occurs in speech much more frequently than in writing; on the other hand, it would be a grave error to think of all colloquial or informal language as slang. Nor is slang to be confused with nonstandard language; it is at times consciously employed for a particular effect by persons of unquestioned cultivation.

Dictionaries are far from uniform in what they label as slang; even the special dictionaries of slang include many entries which do not at all fit the concept as it has been set forth here. The label *slang* after a word or a particular meaning of a word is an indication of its general unsuitability for formal communication; it suggests moreover that when used informally, it may have something of a slight shock value in a serious context; at the very least it will call attention to itself. This would be true, for example, of *boss* used adjectivally in the sense of "great, wonderful," of *bug off* for "go away!" and of *bug out,* "to escape, run away." Each country where English is a native language has its own variety of slang. *Wizard* is often used in England as a blanket term of approval; *dinkum* is confined to Australia. Both are relatively unknown in the United States. In this dictionary, slang terms found in other English-speaking countries will be labeled as to their place of origin. If an item is simply characterized as *slang* with no additional qualifying term, it may be assumed to be current in this country.

Regional Variation

In no English-speaking country is the language uniform over the entire area. In certain fields of the vocabulary, terminology differs from one part of the country to the other. This is especially true of words having to do with the more homelike and intimate aspects of life: the physical environment, the home, foods and cooking, the farm and farm operations, the fauna and flora. The literary term *earthworm* is called an *angleworm* in certain regions and a *fishworm* or *fishing worm* in others, and in addition there are several terms which have a much more restricted currency: *eaceworm, angle dog,* and *dewworm. Skillet* and *spider,* though now somewhat old-fashioned, are still used for *frying pan* or *fry pan* in some areas. Limited access highways have developed a highly varied terminology: *turnpike, freeway, expressway, parkway,* to mention only a few.

It is impossible in a general dictionary such as this to include all such variants, nor would it be helpful to label as *Regional* every term limited to extensive regions. Nevertheless, in terms of its function as an accurate recorder of the language, the dictionary must inform its users when a term, limited geographically, differs from a more commonly preferred synonym. There is a problem here in that dialect research in this country is still going on and that reliable information about the regional incidence of many terms is not yet readily available. In general the policy of this dictionary will be to indicate that a word is regional when that is known to be the case and when the word is not likely to be familiar to others outside the region of its use, but there will be no attempt to delimit the precise areas of its occurrence.

Nonstandard English

The very fact that a painstaking attempt has been made to clarify the concept of Standard English should be evidence in itself that there are features of the language which do not meet these requirements. Most of the aberrations are matters of grammatical form: *hisself* instead of *himself, hisn* instead of *his, growed* instead of *grew* or *grown, anyways* instead of *anyway,* and so on. Occasionally these are matters which pertain wholly to the vocabulary, like *irregardless,* or to the pronunciation, as with the dropping of the first *r* in *secretary* and *library.*

At one time it was the custom for dictionaries to employ the label *illiterate* for such deviations from standard usage. For several reasons the term is far from satisfactory. The percentage of actual illiterates in the United States is relatively small, even if so-called functional illiteracy is to be used as a criterion. The type of expressions so labeled often extended to many persons who had experienced some schooling. Because of these and other considerations dictionaries have recently tended to use *nonstandard* as the preferred designation for deviations from the linguistic norm which tend to be matters of social rather than regional dialect. It is rare, of course, for anyone to consult the dictionary

for the meanings of words so labeled. The principal service that the dictionary performs is to indicate their status.

Usage Notes

It must be recognized, however, that there is no immediately definable hard-and-fast line separating the standard from the nonstandard. There is, indeed, a gray area, a zone of disputed items about which there may be considerable difference of opinion, even among authorities of equal experience and eminence. In connection with some of the locutions falling within this zone of uncertainty, not only must the extent of use by speakers of the standard language be considered but also the attitude toward the word or construction in question. For example, there can be no doubt that many react with aversion to the terms *lady doctor* and *cleaning lady*. They regard *lady* here as an example of false gentility, and much prefer *woman* to signify gender. Logical or illogical, informed or uninformed, this fairly widespread feeling is part of the total record, the total history of the word, and as such, it is the function of the dictionary to take note of that fact. Clearly no single label would suffice in this instance; an explanation of some sort is called for. This dictionary, along with many other reference works on language, copes with problems such as this through the device of a usage note, which, although necessarily brief and concise, does explain the nature of the problem that has arisen in connection with this particular word.

Further issues about usage may arise from mistaken grammatical analysis on the one hand, or the failure to distinguish what is current in informal as opposed to the formal standard language on the other. An instance of the latter is the use of *like* as a conjunction introducing a subordinate clause ("He didn't work like his father worked.") Reliable measures of the incidence of this construction indicate that it has a high frequency in informal English but that it occurs only rarely in the formal written language. But again there are some who are reluctant to accept it. Labeling the construction *informal* would probably satisfy the purely factual requirements of the situation, but it would fail to warn the reader of the dictionary that his use of the construction might give offense in some quarters. Again a brief statement is more helpful than a single unmodified categorization.

As one compares the usage notes in various dictionaries, he is likely to find a wide divergence of attitude and philosophy, ranging from a fairly broad permissiveness to a nervous reluctance to admit any deviation from the most rigid adherence to approved formal usage of a century ago. It is the considered opinion of the editors of this work that neither of these extremes is well calculated to serve the needs of those who look to the dictionary for help in matters of this kind.

Language changes from century to century and from generation to generation. To the extent that these changes have affected the usage of Standard English it is the responsibility of the dictionary to acknowledge them. There is often a discrepancy, as well, between what is in actual fact current as Standard English and what many opinionated or ill-informed persons believe that usage to be. The responsibility of the dictionary here is to set the record straight, to report and interpret the facts as accurately as possible. At the same time the dictionary must be equally perceptive in distinguishing, for the person who consults it, between standard usage which is acceptable beyond a shadow of doubt and that about which there is some qualification or question. Unfortunately, there is a great lack of awareness on the part of the general public about the services which dictionaries do perform with respect to matters of usage. As dictionaries improve in their faithfulness to fact and the nicety of their discrimination, it is reasonably certain that readers will take fuller advantage of the service which only a carefully and conscientiously edited dictionary is capable of offering.

The English of Canada, Australia, and New Zealand

by H. Rex Wilson

As the language of the greatest colonizing nation in modern times, English has spread to widely separated parts of the world and has evolved on its own as the first language of the dominant peoples of several now-independent nations. The largest of these is the United States, but just as inhabitants of both sides of the Atlantic recognize the difference between American English and that of the Old Country, so Canadians, Australians, and New Zealanders are conscious of respectable varieties of English within their boundaries which differ in various degrees and ways from the language used by the residents of Great Britain or the United States.

Canadian English

Scholarly interest in Canadian English has developed real strength only since World War II, although the bibliography of writings on the English spoken in Canada goes back over a hundred years. This literature is disproportionately loaded with alarm and indignation over the unfortunate spread of "Americanisms." Because Canada evolved by gradual stages from a group of colonies to an independent nation, the long-held British connection has led to false linguistic expectations on the part of some Englishmen and Canadians, and even of a few residents of the United States. To the majority of visitors from the U.S. who come from the states just south of the border from New York and on westward, Canadians speak "just like us." And indeed even the most exacting students of Canadian English would have to admit that superficially this remark is justified.

Origins

In its origins Canadian English is predominantly American. It descends directly from the language of pre-Revolutionary War settlers on the seaboard and immediate hinterland of the present United States. In the uprootings, both forced and voluntary, which followed the Revolution, Canada received an English-speaking population drawn almost entirely from the old American colonies. It is estimated that by 1830 eighty percent of the English-speaking population of Canada could be traced back to the United States. Upon the language of this majority the relative handful of governors, administrators, military officers and clergy of English origin could not be expected to make any substantial impression, although as members of a highly prestigious group they were bound to have some effect.

Some time before the settlement of the American colonies, some groups in England began to lose the *r*-sound between a vowel and a following consonant (as in *art*). This sort of pronunciation and the one which retained the older *r* were rivals both in England and in some of the settlement areas of the U.S. The "*r*-droppers" prevailed in eastern New England and in the coastal South, but the *r*-sound was retained throughout the rest of the colonies, and it was largely from these areas

that the basic post-Revolutionary population of Canada was drawn. Meanwhile, the *r*-dropping became the dominant speech fashion in England. These easily-noted features are the main ones which cause superficial observers from England to identify Canadian speakers as "American" and U.S. visitors to find that Canadians talk "just like us."

But subsequent settlement, independent patterns of pronunciation, the distinctive experience of the physical environment, contact with other linguistic groups, and the prestige of the colonial administration have imposed upon Canadian English features which set it off from other types of English.

Pronunciation

The first difference in language that most people notice when they meet someone from another speech area is in pronunciation. Strangers have accents. But this is just what Canadians seem to lack when they are first heard by many residents of the U.S., and even visitors from the South and Southwest will find Canadian speech little different from that of the "Yankees." The origins of Canadian English just mentioned will help account for this.

Sooner or later the visitor to Canada will notice that Canadians say *oot* and *aboot* for *out* and *about*, but if he asks about it Canadians will deny it. And, strictly speaking, they are right. However, what has been heard is something different from the vowel in *down* and *mountain*. This tendency to have a different vowel before sounds like *t* and *s* than before sounds like *d*, *z*, *n* is very widespread. In the verb *house* (where the vowel is followed by a *z* sound) the vowel sound will be the same as the one in *down*, and although it may sound different in various places in Canada the range of difference will be about the same as in the U.S. But the vowel sound of the noun *house* (where the vowel is followed by an *s* sound) is different. This pronunciation varies quite a bit from place to place and even in the pronunciations of one speaker, but the general characteristic of most Canadian speech is to have a difference between the vowels in these different situations, and Americans are left with the impression that Canadians say *oot* and *aboot*.

The pronunciation of vowels varying on the basis of the following sound is not unique and can be found in scattered parts of the United States. In these areas and in Canada the vowels of *write* and *ride* show a similar pattern.

The pronunciation of a few individual words may also catch the visitor's ear. The words *either* and *neither* have first syllables which rhyme with *eye* with far greater frequency than is found in the United States. Some longer words, such as *controversy*, may have the main stress on the second rather than the first syllable, reflecting the prestige of British pronunciation supported by private schools set up on the British model and by returning Canadians who have studied at British universities. Although not unknown before World War II, the British pronunciation of *schedule* (shed′yo͞ol) has gained ground in recent years, apparently under the influence of the Canadian Broadcasting Corporation.

The pronunciation of the word *clerk* like that of the family name *Clark*, once a striking feature of Ontario speech, has now died out except in official usage (*County Clerk*) and in the Presbyterian Church (*Clerk of Session*).

Regional accents are not prominent in Canada, probably because of a large amount of movement within the country and relatively few isolated homogeneous settlements of native speakers of English. The island provinces of Newfoundland and Prince Edward Island are notable exceptions, while the imprint of New England continues to set parts of Nova Scotia and New Brunswick off from Ontario and from the Scottish-settled areas of Nova Scotia. Some areas originally settled by non-English-speakers have produced distinctive varieties of English as the result of earlier bilingualism.

Spelling Differences

For the most part, differences in spelling between England and the United States are traceable to Noah Webster, America's first great lexicographer. Canadians understandably did not come under the influence of Webster's spelling reforms in the early 19th century, and British spelling conventions have persisted. Words like *traveller* and *jeweller* continued to have double *l*, and *-our* spellings persisted in words like *honour* and *flavour*. The noun *practice* continued to be set off from the verb *practise*. Today these spellings are no longer insisted upon in most school systems, although consistency in usage by the individual is expected. This "loss of standards," especially in the *-our* spellings, can still raise furious condemnation in the editorial pages of some newspapers in Canada. In their own style these pages and the advertisements in the paper may tend to be conservative, while the news columns tend toward "American" spellings.

The spellings *tyre* and *kerb*(*stone*) are as strange to Canadians as to Americans and must be explained in Canadian dictionaries as *Brit.* for *tire* and *curb*(*stone*). The spelling *gaol* for *jail* was once common in newspapers but began disappearing even before World War II.

Vocabulary

The words which a nation uses to conduct its business are great reflectors of its discovery of its environment and its historical development. In 1967 a group of scholars under Professor Walter S. Avis produced *A Dictionary of Canadianisms on Historical Principles* which provides a comprehensive view of the growing and changing vocabulary of Canadian life. This vocabulary has been drawn from many sources, and much of it belongs to experiences shared with settlers of the northern states in the common development of North America. It is not surprising, therefore, that many words reflecting this early experience have passed out of use or are found only in writings referring to specific historical periods.

An American would be puzzled, to say the least, by a reference to an alligator in the forests of Ontario. In the movement of logs by water the lumber industry was greatly helped by *alligators*, amphibious paddle-wheel scows, equipped with a winching arrangement for travel overland.

An equally puzzling term, but in this case a contemporary one, might be found in the statement, "We went to separate schools together." In many parts of Canada religious groups have the legal right to set up their own schools supported by public funds. These are usually referred to as *separate schools*, and a statement such as the one mentioned may be made without suspicion of humorous intent or mental deficiency.

In the Arctic (usually pronounced *Artic*) the term *white-out* has been formed on the model of *black-out* to describe a condition where reflected light from snow or haze or fine blowing snow obscures the horizon and features of the landscape.

Canadian coiners of words have sometimes shown a fine sense of irony as in the now obsolete *Nova Scotia nightingale* for a "singing" marsh frog, and *CPR strawberries* for prunes, which were a prominent item of diet during the building of the Canadian Pacific Railway. On the whole, Canadians have not been distinguished in coining regional names. Most are obviously derivative, like Winipegger or Newfie (Newfoundlander), but Maritimers may be called *Bluenoses* (from Nova Scotia), *Herringchokers* (from New Brunswick) and *Spud Islanders* (a reference to the importance of the potato in the economy of Prince Edward Island).

The *Dictionary of Canadianisms* shows a surprising number of words which have long been accepted in the United States but apparently first gained currency in Canada. In recent times the most striking exports have been in the vocabulary of lacrosse and hockey. *Lacrosse* is of Canadian French origin from a fancied resemblance between the stick used in the game and a Bishop's crozier. While U.S. fans are familiar with the whole standard terminology of hockey, including the penitential seat known as the *penalty box*, they may not know the journalistic coinage *sin bin*.

Because of an administrative history different from that of the United States, Canadian government offers a large number of distinctive terms of British origin. The title *Prime Minister* is, of course, widely

used in other countries, but the names of some other positions may be surprising and even a little quaint, such as the term *Reeve* for the council chairman of a village, township, or municipal district council in Ontario and the West. In Ontario the County Council composed of Reeves and Deputy Reeves is presided over by a *Warden*. The familiar title *Sheriff* in Canada signifies a court officer and not a man charged with general law enforcement and peacekeeping duties. A Lieutenant- (pronounced *leftenant*) Governor is not a person who acts for a Governor but the official and ceremonial head of the government of a Province, representing the Crown.

Since colonial times Canadian English has imported virtually its whole technological vocabulary from the United States. Visitors from England have problems in discussing automobile maintenance until they have learned the American words for parts of their motor cars. Canadian railroading, established in large part by American engineers, uses the terminology they brought augmented by later imports. The term *sleeper* for a railway tie held its own until the 1920's at least, but now is rarely heard and one Canadian dictionary labels it *British*.

Canada made its first contribution to the jet age in 1854 by the invention and naming of kerosene in Nova Scotia. Oddly, in Ontario a term of apparent Pennsylvania origin, *coal oil*, is preferred. So widely accepted has *kerosene* become in the U.S. that it has even raised objections in New Zealand as an "Americanism" displacing the British *paraffin (oil)*.

Canadians have borrowed words from languages with which they have had contact. *Woodchuck*, although it looks and sounds English, is derived from an Algonquian word which was first imitated by English speakers as *wejack*. The Canada jay has a name that goes one step further. A Cree name was first imitated as *Whisky John* and then familiarized to *whiskyjack*.

Naturally the long French sojourn in Canada before English settlement has left its marks and, as far as place names go, this extends beyond the border of Canada. The word *portage* is classically representative of the early years, and it has never been displaced by *carry* or *carrying place*. In politics the old terms *Bleu* (or *Parti Bleu*, Conservative) and *Rouge* (or *Parti Rouge*, Liberal) may occasionally appear in English newspaper accounts of politics in Quebec. Sometimes these are Anglicized to *Blue* and *Red*.

Influenced by the special economics of printing in a bilingual country, no passenger train of the Canadian National Railways has "left" its station for many years, although most have "departed" fairly close to schedule. The abbreviations *Arr.* and *Dep.* in the timetable require no translation. Similarly, the two telegraph companies in the country have settled on *telecommunications* in their names.

In its modest space program Canada has named its first communications satellite *Alouette* (French, lark) and a more recent one *anik* (Eskimo, brother).

The English of Australia and New Zealand

The English of Australia and New Zealand is much more satisfyingly exotic to the American ear than that of Canada. The first impression is that the language of these countries is very much like British English, and, although extended observation will show that these dialects do have some very distinctive characteristics of their own, the initial impression is justified by history. The time of separation from the mother country is much shorter for both of these countries; there are still members of the older generation who refer to England as "Home" although not born there themselves. Australia did not begin to receive English-speaking settlers until after the American Revolution, and New Zealand not until about fifty years later. Further, the origin of the population was much more predominantly English in the formative years of Australian and New Zealand society than it was in North America in a similar period, with a much lower proportion of Scots and Irish. Apparently the majority of the settlers were from the south rather than the north of England. Australian and New Zealand speakers tend to be "*r*-droppers."

Australian English

Australian English became well known to United States servicemen during the Second World War. Although the song "Waltzing Matilda" with its baffling vocabulary had made its way across the Pacific some time before, wartime contacts first made Americans aware of the peculiarities of Australian pronunciation, and a considerable collection of teasing jokes developed—such as the one about the USAAF Major who was brought unconscious to an Australian hospital in Port Moresby, New Guinea. Regaining consciousness and feeling more dead than alive, he asked a nursing sister:

"Was I brought here to die?"

"Oh, no, sir," she replied, "You were brought here yesterday."

Like most such jokes this exploits the so-called Cockney feature in which the vowel of *day* as pronounced by most Americans and Canadians is replaced by the vowel of *die*. Australians themselves seem to enjoy humor based on their speech peculiarities, as is evidenced by the success of a slim volume called *Let Stalk Strine* by Afferbeck Lauder, who claims to be Professor of Strine Studies at the University of Sinny. (The title and author are stated, appropriately, in Strine and are translated as follows: *Let's Talk Australian* by Alphabetical Order, Professor of Australian Studies at the University of Sydney.)

The form of language on which this book is based is what is usually called "Broad" Australian, a term also used in New Zealand. Australians and New Zealanders often modify their speech toward the standard British "Received Pronunciation" (RP), although the tendency seems stronger in New Zealand than in Australia. Accordingly it is not unusual to find an Australian Ph.D. at a North American university happily doin' what comes naturally as far as pronunciation is concerned, although his professional writing would show no marked difference, beyond personal style, from that of his colleagues who speak other dialects of English.

English speakers did not originally come voluntarily to Australia. English law had provided "transportation" as a punishment as early as the reign of Queen Elizabeth, and a substantial amount of the labor on early American plantations was performed by convicts shipped out from England. After the American Revolution attention turned to Australia as a place to send these undesirables. These "unwilling emigrants" were a very mixed group, and included many who had been convicted of such crimes as petty theft or poaching, or had been imprisoned for debt. Such constructive skills as they brought with them were chiefly those most useful in an urban setting. The unskilled often learned trades to supplement these. Their language was that of the city, so that Australian rural vocabulary had to be supplied from new sources, thus distinguishing the agricultural and cattle-raising vocabulary from that of the Old Country (although some technical terms, like *drover* for a cattle herder, have had currency in England, Australia, and America).

Australians have been, almost from the beginning, very mobile. Originally the population was confined between the sea and the Great Dividing Range on the east coast, but in 1813 a pass was found through the range, and free settlers, who had begun to arrive in 1793, began moving into the rest of the continent. As cattle and sheep raising and mining developed, convict labor was assigned to free settlers on contract, so that even they became mobile—often more so than the free settler who held land. Under varying special arrangements some convicts were free to move about within certain territorial limits and make their own working contracts with employers. As a result, Australia appears to have few dialect differences, except in local borrowings from the languages of the native peoples and the distribution of the vowel of *bat* and that of *father* in certain words.

Pronunciation The most obvious difference between Australian and most American English, after *r*-dropping, is the apparent *day/die* confusion. When an Australian pronounces *day* he does not quite rhyme it with an American's pronunciation of *die*, but it is close enough to cause confusion to the American, at least on first meeting. This parallels roughly the initial impression that Canadians say *oot* for *out*. A characteristic less apparent to Americans, unless they come from New Eng-

land, lies in the vowels of *path, grass, contrast* which have the sound of the vowel in *bat* rather than of *father* in the areas of oldest settlement, but may be found with the vowel of *father* in the state of South Australia, and there *dance* may also be found with this pronunciation.

Whenever a vowel in any English dialect becomes too much like another, the speakers of that dialect tend to shift the second one to keep distinctions between words which otherwise would come to sound too nearly alike. Thus, other vowels in Australian English also seem displaced to the American ear. The distinction between *day* and *die* is maintained by a vowel in *die* which approaches that of *boy* in American speech, and *boy* in turn has a vowel which is difficult for "foreigners" to hear and impossible to represent without using phonetic notation.

Vocabulary Once a jolly swagman camped by a billabong,
Under the shade of a coolibah tree;
And he sang as he watched and waited
till his billy boiled,
"You'll come a-waltzing matilda with me."

This verse and several equally incomprehensible ones following it are well known to participants in American community sings. Much of the diction is now rather old-fashioned in Australia. The *a-waltzing* is quite common to many older varieties of English and certainly is not typical of today's Australian speech. *Waltzing matilda* is probably preserved only because of this song. *Matilda* is not capitalized, nor is "she" surrounded by commas—although more than one tank and possibly some aircraft received "her" name in World War II. The *swagman,* roughly equivalent to the older American *bindiestiff,* an itinerant who carried his belongings rolled up in a bundle or *swag (bindle),* is gone from the scene. Carrying the swag or *matilda* was known as *waltzing matilda.* The *billabong* is a name given by native people to a blind channel of a river, roughly equivalent to a bayou; *coolibah* is a native tree name. The *billy* is a cylindrical metal cooking pot assumed to be derived from the native word *billa* (water, as in *billabong*).

In the vocabulary of daily use Australians unexpectedly use the word *station* for what animal raisers in the United States would call a ranch, and they have adapted words of international currency to special uses, such as calling a shopping cart a *jeep.*

Among the borrowings from the native languages the word *kangaroo* appeared in print in the reports of Captain James Cook before actual settlement had begun. It has been borrowed for the American coinage *kangaroo court* which in turn has been reborrowed into Australian English. The word *boomerang* has developed many figurative meanings throughout the English-speaking world, starting, apparently, with Oliver Wendell Holmes' use of it in 1845.

New Zealand English

New Zealand English shares some features with Australian, partly through exchange of population and partly through being settled from the same general area of England. Although from a distance the two countries seem close together, New Zealand is not a group of islands off the Australian coast, as it has sometimes been described. The Tasman Sea which separates them is 1,200 miles wide. Nevertheless, some of the earliest settlers of New Zealand were escaped convicts from Australia. In the period before organized settlement began in 1839 there were also deserters from ships, particularly whaling vessels, so that there may have been a small contribution to the population from New England.

Pronunciation Some of the vowel features of Australian English which have been discussed are reflected in New Zealand speech. The vowels in words of the type *dance, path,* and *grass* have the vowel of *father* (as in South Australia) rather than that of *bat.* Greek compounds ending in *-graph,* however, have the vowel of *bat.*

The vowels of *day, die,* and *boy* follow the Australian pattern, and some speakers even have a vowel for *die* which could sound like a short "o" to visitors, who might look in vain on a map for a place called Crosschurch, not knowing that the mapmakers spell it *Christchurch.*

The most striking feature of New Zealand pronunciation is the shift of short vowels so that *bet* might sound like *bit* (and a parade might be described as a *precision*). The vowel of *bat* meanwhile gets close to that of *bet* so that the main mountain range of the country, the Southern Alps, would seem to rhyme with *helps.*

Vocabulary Except for borrowings from the native languages and obvious recent imports, it is often very difficult to tell which of the items of the New Zealand vocabulary that it shares with Australia are the products of these islands. Because of its slightly earlier settlement and its role as the source of some of the early New Zealand population, Australia is usually assumed to be the source of the common vocabulary, but scholars in that part of the world are engaged in sorting these words out. As yet neither Australia nor New Zealand possesses the equivalent of the *Dictionary of Americanisms* or the *Dictionary of Canadianisms,* but an absorbing collection of essays on the English of the two countries and related territories has been published in Australia under the title *English Transported,* edited by W. S. Ramson. One of its important themes is the need for such works.

Whatever their origin, some terms have a specific New Zealand meaning. To an Australian the term *bush* may merely mean undeveloped scrub country, but to the New Zealander it is dense forest.

Recent American influence is easier to trace. The adoption of the term *cent* in both Australian and New Zealand as a unit of decimal coinage reflects this, although the term *dollar* was long known as a slang name for five shillings.

Borrowings from the native population, particularly for the names of plants and animals, have been very important. The *kiwi,* a flightless bird, has given its name not only as a term for New Zealander, but for nonflying personnel in air forces and airlines outside of New Zealand, especially former American stewardesses who have been assigned to ground duties.

The interplay of English and the native language (Maori) has been beset by some interesting pronunciation problems, particularly in the matter of the type of "r" used by each. One apparent borrowing from Maori, *taipo,* meaning *devil,* has been reinterpreted as a possible Maori borrowing from English *tripod,* for the support for the land-surveyor's theodolite which the Maori saw as a "land-stealing devil." On their side, English speakers have had their problems pronouncing some Maori words, particularly in interpreting "r"s as "d"s. Thus to find a burr referred to as a *biddybid* might seem to a visitor like a too-cute joke, but actually this is a distortion of the Maori word *piripiri.*

New Zealanders seem to share some words with other parts of the English-speaking world but with surprisingly different meanings. The term *section* for a city building lot might give a western American farmer an exaggerated idea of the spaciousness of New Zealand real estate developments. An Englishman, to whom *lay-by* is a recess at the roadside suitable for parking, would be startled to find that this refers to a purchase plan known in America as *layaway.*

Do We Speak the Same Language?

Not even the most extreme differences in the dialects of English justify calling any two of them different languages, and yet the ways in which we use what are apparently the same words can seem a barrier rather than an aid to understanding. Not only would the New Zealand use of *section* surprise a North American wheat farmer, but his use of *block* for a large tract of land in a rural area seems to carry confusion to extremes.

The Australian use of *jeep* as the name for a shopping cart is merely whimsical to the American, and if he were a trotting fan he would be surprised a few years ago to learn that mothers in Dunedin, New Zealand, wheeled their young children about in *sulkies.*

Sometimes we sort out sets of words in peculiar ways. The American *checks* his *baggage,* the Englishman *registers* his *luggage,* the New Zealander *checks* his *luggage.* The American gets his *mail* from the *mailman* or *letter carrier,* the Canadian may be served by a *mailman* or

postman who brings his *mail*, and the New Zealander gets his *mail* or *letters* from a *postman*.

The quality of a meaning may be very different, too. In the north of England *homely* is complimentary, and in Australia a *squatter* or a descendant of one has a certain prestige. Early settlement of the interior was rather haphazard and settlers merely occupied land, having their titles regularized later. In the history of the United States the nearest equivalent is *homesteader*, which is in distinct contrast with the American use of the term *squatter*.

Even a word so closely associated with Old England as *tea* is highly unreliable. To most Americans it is either a beverage or an afternoon social event (at which, in some regions, only coffee is served). In England it can be a daily or twice-daily occurrence and range, in the latter part of the day, from a light meal to a rather heavy one in the form known as Scottish High Tea. In Australia and the Maritime Provinces of Canada *tea* is apt to be another name for *supper*. And in New Zealand *supper* is a bedtime snack.

Syllabication Division of words into syllables — as an indication of the points at which a word may be broken at the end of a line — is indicated by a centered dot (·) in the main bold-faced entries, as **ad·jec·ti·val.** In the secondary entries (run-on derivatives and variant forms) the centered dot is eliminated wherever the primary and secondary syllable stresses are marked, as in **ad′jec·ti′val·ly.** In hyphened compounds the hyphen takes the place of a centered dot. Phrasal entries of two or more words are not syllabified when each element is entered elsewhere, as in **caballine fountain.**

Pronunciations The pronunciation is shown in parentheses immediately following the bold-faced entry, as **di·chot·o·my** (dī·kot′ə·mē). When more than one pronunciation is recorded, the first given is usually the most widely used wherever it has been possible to determine extent of usage; often, however, usage may be almost equally divided. The order of the pronunciations is not intended to be an indication of preference; all pronunciations shown are valid for educated American speech.

The syllabication of the pronunciations follows, in general, the syllabic breaks heard in speech, rather than the conventional division of the bold-faced entry, as **bod·ing** (bō′ding), **grat·er** (grā′tər), **ju·di·cial** (jōō·dish′əl), **an·es·the·tize** (ə·nes′thə·tīz).

When a variant pronunciation differs merely in part from the first pronunciation recorded, only the differing syllable or syllables are shown, provided that there is no possibility of misinterpretation, as **eq·ua·bil·i·ty** (ek′wə·bil′ə·tē, ē′kwə-). Phrasal entries (those which consist of two or more words) are not pronounced if the individual elements are separately entered in proper alphabetic place.

Parts of speech These are shown in italics following the pronunciation for main entries, and are abbreviated as follows: *n.* (noun), *v.* (verb), *pron.* (pronoun), *adj.* (adjective), *adv.* (adverb), *prep.* (preposition), *conj.* (conjunction), *interj.* (interjection). When more than one part of speech is entered under a main entry, the additional designations are run in and preceded by a bold-faced dash, as **cor·ner** (kôr′nər) *n.* . . . — *v.t.* . . . — *v.i.* . . . — *adj.* . . .

Verbs used transitively are identified as *v.t.*, those intransitively as *v.i.*; those used both transitively and intransitively in all senses are designated *v.t.* & *v.i.*

Inflected forms These include the past tense, past participle, and present participle of verbs, the plural of nouns, and the comparative and superlative of adjectives and adverbs. The inflected forms are entered wherever there is some irregularity in spelling or form. They are shown in boldface type, with syllabication, immediately after the part of speech designation. Only the syllable affected is shown, provided there is no ambiguity possible, as **com·pute** (kəm·pyōōt′) *v.t.* **·put·ed, ·put·ing.** An inflected form that requires pronunciation or is alphabetically distant from the main entry may also be separately entered and pronounced in its proper vocabulary place.

Principal parts of verbs The order in which the principal parts are shown is past tense, past participle, and present participle, as **com·e** (kum) *v.* **came, come, com·ing.** Where the past tense and past participle are identical, only two forms are entered, as **bake** (bāk) *v.* **baked, bak·ing.** When alternative forms are given, the first form indicated is usually the one preferred, as **grov·el** (gruv′əl, grov′-) *v.i.* **grov·eled** or **grov·elled, grov·el·ing** or **grov·el·ling.** Variant forms not in the standard vocabulary are shown in parentheses and labeled, as **drink** (dringk) *v.* **drank** (*Obs.* **drunk**), **drunk** (*Obs.* **drunk·en**), **drink·ing.** Principal parts entirely regular in formation — those that add *-ed* and *-ing* directly to the infinitive without spelling modification — are not shown.

Plural of nouns Irregular forms are here preceded by the designation *pl.*, as **a·lum·nus** (ə·lum′nəs) *n. pl.* **·ni** (-nī); **co·dex** (kō′deks) *n. pl.* **co·di·ces** (kō′də·sēz, kod′ə-); **deer** (dir) *n. pl.* **deer.** When alternative plurals are given, the first shown is the preferred form, as **buf·fa·lo** (buf′ə·lō) *n. pl.* **·loes** or **·los; chrys·a·lis** (kris′ə·lis) *n. pl.* **chrys·a·lis·es** or **chry·sal·i·des** (kri·sal′ə·dēz). Words that have different plural forms for specific senses are shown as follows:

an·ten·na (an·ten′ə) *n. pl.* **an·ten·nae** (an·ten′ē) *for def.* **1,** **an·ten·nas** *for def.* **2.** **1** *Entomol.* One of the paired, lateral, movable, jointed appendages on the head of an insect or other arthropod. **2** *Telecom.* A system of wires upheld in a vertical or horizontal position by a mast or tower, for transmitting or receiving electromagnetic waves in wireless telegraphy, telephony, and radio. . . . . .

Comparison of adjectives and adverbs The comparatives and superlatives of adjectives and adverbs are shown immediately after the part of speech when there is some spelling modification or a complete change of form, as **mer·ry** (mer′ē) *adj.* **·ri·er, ·ri·est; bad**[1] (bad) *adj.* **worse, worst; well**[2] (wel) *adv.* **bet·ter, best.**

Definition numbers In entries for words having several senses, the order in which the definitions appear is, wherever possible, that of frequency of use, rather than semantic evolution. Each such definition is distinguished by a bold-faced number, the numbering starting anew after each part-of-speech designation when it is followed by more than one sense. Closely related meanings, especially those within a specific field or area of study, are defined under the same number and set apart by small bold-faced letters.

bol·ster (bōl′stər) *n.* **1** A long, narrow pillow as wide as a bed. **2** A pad used as a support or . . . . . **3** Anything shaped like . . . . . ◆ *Archit.* ▪ The lateral part of the volute of an Ionic capital. ▫ A crosspiece of an arch centering . . . . . **5** *Mech.* A steel block . . . . . — *v.t.* **1** To support with a pillow. **2** To prop up . . . . . **3** To furnish with padding. . . .

Restrictive labels Entries or particular senses of words and terms having restricted application are variously labeled according to: (1) usage level, as *Slang, Colloq.* (colloquial), *Dial.* (dialectal), *Poetic,* etc.; (2) localization, as *U.S.* (United States), *Brit.* (British), *Austral.* (Australian), *Scot.* (Scottish English), etc.; (3) field or subject, as *Astron.* (astronomy), *Geom.* (geometry), *Mining* (mining), *Naut.* (nautical), *Surg.* (surgery), etc.; (4) language of origin, as *Afrikaans, French, German, Latin,* etc.

These labels serve as a guide in the ready identification of special aspects of a word or term as a whole or of one or more of its parts. The usage labels qualify a word in terms of its relationship to standard English; the localized area designations identify the geographical region of the English-speaking world in which a word has originated or where it has particular application; the subject labels indicate that a word or definition has a specialized use in some field of work or study; and the foreign language labels reflect the fact that a word or phrase, although used in English speech and writing, has not yet undergone the process of Anglicization of pronunciation, meaning, or usage, and is still felt to be foreign (these foreign terms are usually italicized in writing).

Restrictive labels that apply to only one sense of a word are entered after the definition number, as:

beat (bēt) *v.* . . . . . **9** *Music* To mark or measure with or as with a baton: to *beat* time. . . . . **13** *Colloq.* To baffle; perplex: It *beats* me. **14** *Slang* To defraud; swindle. . . . . **20** *Physics* To alternate in intensity so as to pulsate . . . . . **24** *Naut.* To work against contrary winds or currents by tacking.

Labels entered immediately after the part of speech designation apply to all the senses for that part of speech; those shown directly after the pronunciation and before the first part-of-speech designation refer to the entire entry, as:

hal·i·dom (hal′ə·dəm) *n. Archaic* **1** Holiness. **2** A holy relic. **3** A holy place; sanctuary. . . .
grouch (grouch) *U.S. Colloq. v.i.* To grumble; be surly or discontented. — *n.* **1** A discontented, grumbling person. **2** A grumbling, sulky mood. . . . . .

A complete list of the label abbreviations used in this dictionary will be found on page xx.

Variant forms In the case of words having more than one approved spelling (as *esthetic, aesthetic*; *center, centre*), the main entry is made under what is considered to be the form in more general use in the United States. The alternate form is cross-referred when it is not within close range of the alphabetic position of the main entry, and is also shown in italic type at the end of the main entry or after all the definitions for a particular part of speech to which it applies. Variant forms that do not require cross-reference are shown in the same position in the main entry but in boldface type with syllabication, stress marks, and, when necessary, pronunciation. A variant that applies to but one of several senses of a word is attached with a colon to the definition to which it pertains.

bach·e·lor (bach′ə·lər, bach′lər) *n.* . . . . . **3** A young knight serving under another's banner: also **bach′e·lor-at-arms′.** . . . . . **5** A young male fur seal kept from the breeding grounds by the older males: also called *holluschick.* . . . . . .

Forms that have some restricted usage are labeled accordingly, as **hon·or** . . . Also *Brit.* **hon′our.**

Phrasal entries Numerous phrases are entered and defined in the vocabulary section of this book in alphabetic place according to the first word of the phrase, as **bird of paradise, earth inductor, free verse, right of search.** In many other instances, however, it has been more expedient to enter and define such phrases under the main element. Thus, *Old English* and *Middle English* are run in as subordinate entries under **English,** preceded by a heavy dash; *alternating current, direct current,* and *eddy current* are entered and defined under **current.** All such entries are cross-referred in alphabetic place.

In some entries, particularly those for plants and animals, varying combinations of the word being defined are given within the main entry in boldface type and not entered in alphabetic place, as **leop·ard** · · · **2** Any similar cat, such as the **American leopard** or jaguar, the **hunting leopard** or cheetah, the **snow leopard** or ounce.

Encyclopedic entries A similar device has been employed where it has been advisable to bring together in one place as much logically related information as possible. Certain groups of terms are fully treated in an alphabetic boldface listing under the primary word common to each group. This treatment points up significant relationships between terms, facilitates comparison and selection of the term desired, and allows for the presentation of a range of information ordinarily characteristic of encyclopedias. For example, the entry for **time** contains a listing, with full definitions, of the various classifications from *astronomical time* through *zone time.* Similar listings have been included under the following entries: *angle, calendar, court, cross, current (ocean currents), diamond, fraction, glass, law, number, school, spaniel,* and *terrier.* All terms so entered are separately cross-referred.

Idiomatic phrases Often a main-entry word, when in conjunction with various prepositions, adverbs, adjectives, etc., will form a phrase distinct in sense from the meaning of the combined elements. Such idiomatic phrases are shown in smaller boldface type within the entry for the principal word in the phrase; they are preceded by a heavy dash, and follow all the definitions for the particular part of speech involved. Thus, under the verb **carry** will be found subordinate entries for the phrases *carry arms, carry away, carry off, carry on,* etc.; under the entry for the noun **hand** such phrases as *at first hand, by hand, to have one's hands full,*

to lend a hand, etc., are set apart and defined in detail.

Collateral adjectives Because of the grafting of Norman French and late Renaissance Latin idioms on early English we find a good many English nouns which have adjectives closely connected with them in sense but not in form, such as *brachial* with *arm, cervical* with *neck, lacustrine* with *lake, hibernal* with *winter, diurnal* with *day, reticular* with *net,* and the like. Such adjectives which, through a collateral line of meaning, have come to express certain special adjectival senses, are, of course, listed in their regular alphabetic place, but, as a convenience for those who do not know or cannot recall them, a large number of such functionally related adjectives have been entered with their associated nouns, attached to the particular meaning of the noun to which they apply, in the form ◆ Collateral adjective: *brachial.*

Homophones Words identical in sound but different in spelling and meaning, such as the groups *altar / alter, filter / philter, hail / hale, principal / principle, right / rite / write,* and several hundred others, often lead to confusion in the writing of English. A large number of these have been listed just before the etymology of every relevant entry, in the form ◆ Homophone: *altar.* No entries have been made for such groups as *horse / hoarse, burrow / burro* which, because of variant pronunciations, are homophonic for some speakers but not for others.

Etymologies The etymologies are shown in brackets after the definitions and before the run-on derivatives. The following examples show the manner of entry and the use of cross-references: (1) **spe·cial** . . . [<OF *especial* <L *specialis* < *species* kind, species]; the etymology is to be read: derived from (<) the Old French (OF) word *especial* from the Latin (L) word *specialis* which in turn is from Latin *species* meaning "kind, species"; (2) **arroyo** . . . [<Sp.]; here the reading is to be: derived from (<) a Spanish (Sp.) word of the same form and meaning; (3) **has·sle** . . . [? <HAGGLE + TUSSLE]; this etymology is to be read: perhaps (?) derived from (<) a blending of "haggle" and (+) "tussle," the small capital letters indicating that the etymologies of these words will be found under their main entries; (4) **de·cep·tion** . . . [<L *deceptio, -onis* < *decipere.* See DECEIVE.]; (5) **bul·wark** . . . [<MHG *bolwerc.* Akin to BOULEVARD.]; (6) **a·dult** . . . [<L *adultus,* pp. of *adolescere* grow up < *ad-* + *alescere* grow. Related to ADOLESCENT.]; (7) **jour·nal** . . . [<OF <L *diurnalis.* Doublet of DIURNAL.]

Cross-references In (4), "See" directs attention to the etymology under "deceive" for further information; in (5), "Akin to" points to the fact that "boulevard" and "bulwark" are cognate words; in (6), "Related to" indicates that these words derive from different recorded stems of the same word; in (7), "Doublet of" marks the fact that "journal" and "diurnal" are ultimately derived from the same Latin word, but have come into English by different paths, in this case, the former through Old French and the latter directly from Latin.

For the complete list of the abbreviations which are used in the etymologies in this work, see page xx.

Run-on entries Words that are actually or ostensibly derived from other words by the addition or replacement of a suffix, and whose sense can be inferred from the meaning of the main word, are run on, in smaller boldface type, at the end of the appropriate main entries. The run-on entries are preceded by a heavy dash and followed by a part-of-speech designation. They are syllabified and stressed, and, when necessary, a full or partial pronunciation is indicated, as **in·sip·id** (in·sip'id) *adj.* . . . **— in·si·pid·i·ty** (in'si·pid'ə·tē), **in·sip'id·ness** *n.* **— in·sip'id·ly** *adv.*

Usage notes Points of grammar and idiom, when an integral part of definition, are included, following a colon, after the particular sense of a word to which they apply, as **anxious** . . . 3 Intent; eagerly desirous; solicitous: with *for* or the infinitive with *to*: *anxious* for success; *anxious* to succeed . . .

More extensive notes consisting of supplementary information on grammar, accepted usage, the relative status of variant forms, etc., are entered at the end of the relevant entries and prefaced with the symbol ◆. (See **anyone, Asiatic, can, have.**)

Synonyms and antonyms Extended discussions of the differentiation in shades of meaning within a group of related words, or in some cases simple lists of synonyms, are given at the end of relevant entries in paragraphed form after the run-on derivatives. Lists of antonyms are often added as well to point up further distinctions in meaning.

Alphabetization All entries in this dictionary (general vocabulary, affixes, geographical and biographical entries, foreign words and phrases, etc.) are in one alphabetic list, with the exception of an extended list of abbreviations given, for the sake of ready reference, in one section at the back of the book. Thus, the entry for **ampere** (the electrical unit) immediately precedes that for **André Marie Ampère,** for whom it was named; the entry for **Bridge of Sighs** precedes **Bridgeport** and follows **bridgehead**; the prefix **pro-** is entered immediately after the word **pro** (a professional) and before the word **proa** (a sailing vessel).

Hyphens The hyphen used in the spelling of hyphemes (hyphened words) in this dictionary is printed with extra length to distinguish it as a spelling characteristic, as **cap-a-pie, battle-scarred.** This lengthened hyphen is also used in the entries for prefixes, suffixes, and combining forms, as **un-, -less, hydro-.** The standard hyphen is utilized at the ends of lines to indicate syllabic breaks in words ordinarily written solid, as *com-prehensive,* while the lengthened hyphen is retained for the end-of-line breaks in hyphemes.

Homographs These words, which are identical in spelling but differ in meaning and origin (and often in pronunciation), are separately entered and differentiated by the following superior figure, as **bushel**[1] (measure), **bushel**[2] (mend); **pink**[1] (color), **pink**[2] (stab), **pink**[3] (sailing vessel), **pink**[4] (fade). The numbering also serves to simplify cross-reference to such words.

Cross-references Cross-references are directions to see another entry for additional information. They direct the reader from a variant spelling, inflected form, subentry, etc., to a main entry. The entry to be sought is generally indicated in small capital letters, as **car·a·cul** . . . See KARAKUL; **aes·thete** . . . , **aes·thet·ic** . . . See ESTHETE, etc.; **cor·po·ra** . . . Plural of CORPUS; **Old English** See under ENGLISH.

Sometimes a cross-reference is made to a homograph entry or to a particular definition or part of speech of the main entry, as

flied (flīd) Past tense and past participle of FLY[1] (def. 7).
taps (taps) See TAP[2] (*n.* def. 3).

Some entries are defined by citing another form, as

se·pi·o·lite . . . *n.* Meerschaum.

This is a type of cross-reference. Complete information will be found under the word or term used in the definition.

See the note on **Etymologies,** for the system of cross-referring there used.

Prefixes, suffixes, and combining forms These are entered and defined in regular alphabetic order. The prefix is followed by the lengthened hyphen, the suffix preceded by it, as **anti-** *prefix*; **-ical** *suffix.*

Similarly, the combining form is followed or preceded by the lengthened hyphen depending on its position in combination, as **proto-** *combining form*; **-cide** *combining form.*

Word lists The meaning of many combinations of words (hyphemes, solidemes, and two-word phrases) is easily deduced by combining the senses of their component parts. Such self-explaining compounds have been entered in list form under the first element — that is, under prefixes (**bi-, co-, non-, re-,** etc.) combining forms (**auto-, counter-, mid-,** etc.), and words (**corn, heart, man, peace,** etc.). These lists serve to indicate the preferred form of a compound — whether written solid, with a hyphen, or as a two-word phrase. The listings are not intended to be all-inclusive; most of the prefixes and combining forms so entered combine freely in English in the formation of new compounds based on existing forms.

Chemical formulas As an integral part of the definitions of the large number of chemical substances listed in this dictionary, the reader will find the formulas which, in the chemist's shorthand, indicate what constituents enter into a compound, and in what proportions. These formulas, though usually of the simple empirical type, help to prevent confusion in the identification of hundreds of the substances used in medicine, industry, and the arts, and are particularly useful in recognizing distinctions between the two broad fields of inorganic and organic chemicals.

Taxonomic classification Essential technical information regarding the many plants and animals described under their common names is provided by the listing, usually in italic type enclosed in parentheses, of one or more of the principal taxonomic categories — phylum or division, class, order, family, genus, and species — by which they are correctly identified in botanical and zoological usage. This information, checked against the latest and most reliable sources, is especially useful in showing relationships between seemingly very different types and in discriminating within and between deceptively similar groups, such as toads and frogs, spruce and hemlock, and moths and butterflies.

Trade names Of the thousands of words used to identify trademarked or proprietary articles, drugs, processes, and services, a generous number have been entered and defined in this book because of their wide public acceptance. In every such case the word is entered as though it were a proper name: that is, with an initial capital letter, and the added notation, "a trade name" or — chiefly for the pharmaceutical products — "a proprietary name (or brand) . . ." This technique is employed to alert the reader to the commercial status of a word and, by implication, to caution him against employing it in a generic sense that might involve him in legal difficulties with those claiming a prescriptive or legal right to its use. This treatment of proprietary names is in no sense to be interpreted as establishing a formal status within the meaning of any of the various statutes involving the protection and use of trade names, registered or otherwise.

Illustrations, maps, and tables The illustrations in this book — all of them carefully prepared line drawings — have been selected with the emphasis on their explanatory value rather than their pictorial or decorative effect. They often include informative captions, and are intended to supplement the definitions.

A certain number of geographic entries are accompanied by small, precise spot maps which show at a glance just how a given place, region, lake, island, or other feature is related to its immediate surroundings — as under *Congo* (river system), *English Channel, Holy Roman Empire, Suez.*

For a selected group of entries supplementary information has been provided in the form of charts and tables, as for foreign alphabets (see **alphabet**), the geological time scale (see **geology**), chemical elements (see **periodic table**), the major wars of history (see **war**), constellations, clouds, the endocrine glands, etc.

Abbreviations The abbreviations used in the body of this book (in labeling within entries, in etymologies, etc.) will be found listed on page xx. Where abbreviations of main-entry words are entered, they are shown at the end of the entry, as Abbr. *B.A., A.B.* (Bachelor of Arts); Abbr. *AWOL, awol, A.W.O.L., a.w.o.l.* (absent without leave); Abbr. *Dan.* (Danish). Biblical references are to the King James Bible and indicate book, chapter, and verse, in that order, as *Matt.* v 3-12. An extended list of standard abbreviations will be found at the end of the dictionary, following the vocabulary section.

TABLE OF ENGLISH SPELLINGS

SPELLING:

Plurals and Participles

BASICALLY, plurals in English are formed by the addition of *-s* or *-es* (depending on the preceding sound) to the complete word; past participles are formed by the addition of *-ed*, and present participles by adding *-ing*. There are, however, many exceptions. In this book, all such exceptions (the "irregular" inflected forms) are indicated within the entry, in boldface immediately following the part-of-speech label.

fly (flī) *n. pl.* **flies . . .**
sheep (shēp) *n. pl.* **sheep . . .**
cal·ci·fy (kal′sə·fī) *v.t. & v.i.* **·fied, ·fy·ing . . .**
go (gō) *v.i.* **went, gone, go·ing . . .**

Some rules for the spelling of these forms (with the exception of nouns which form their plurals by some internal change and the so-called strong verbs) are listed below:

PLURALS

1. Nouns ending in *y* preceded by a consonant change *y* to *i* and add *-es*.

baby babies story stories

2. Nouns ending in *y* preceded by a vowel add *-s* without change.

chimney chimneys valley valleys

Note, however, that *money* may have either form in the plural — *moneys, monies.*

3. Some nouns ending in *f* or *fe* change this to *v* and add *-es*.

knife knives shelf shelves
BUT: roof roofs safe safes

Note: Some words may have alternate plural forms.

scarf scarfs or scarves

4. Most words ending in *o* form a plural in *-os*.

cameo cameos folio folios halo halos

A few words ending in *o* (*echo, hero, Negro,* etc.) form the plural only in *-oes (echoes, heroes, Negroes),* but many others in this category have alternative plurals in both forms.

buffalo buffalos or buffaloes
mosquito mosquitos or mosquitoes
volcano volcanoes or volcanos

PAST AND PRESENT PARTICIPLES

1. The final consonant is doubled for monosyllables or words accented on the final syllable when they end in a *single* consonant preceded by a *single* vowel.

control, controlled, controlling
hop, hopped, hopping
occur, occurred, occurring
quit, quitted, quitting (*Note*: *a* u *following* q *is not to be counted as an additional vowel.*)
BUT: help, helped, helping (*two consonants*)
seed, seeded, seeding (*two vowels*)

Some words *not* accented on the final syllable have a variant participial form with a doubled consonant; the single consonant form is preferred in the United States.

travel, traveled or travelled, traveling or travelling
worship, worshiped or worshipped, worshiping or worshipping

2. Words ending in silent or mute *e* drop the *e* before *-ed* and *-ing*, unless it is needed to avoid confusion with another word.

change, changed, changing love, loved, loving
singe, singed, singeing dye, dyed, dyeing

3. Verbs ending in *ie* usually change this to *y* before adding *-ing*.

die, died, dying lie, lied, lying

4. Verbs ending in *c* add a *k* before *-ed* and *-ing*.

mimic, mimicked, mimicking
picnic, picnicked, picnicking

PRONUNCIATION KEY

The primary stress mark (′) is placed after the syllable bearing the heavier stress or accent; the secondary stress mark (′) follows a syllable having a somewhat lighter stress, as in **com·men·da·tion** (kom′ən·dā′shən).

FOREIGN SOUNDS

à as in French *ami, patte*. This is a vowel midway in quality between (a) and (ä).

œ as in French *peu*, German *schön*. Round the lips for (ō) and pronounce (ā).

ü as in French *vue*, German *grün*. Round the lips for (o͞o) and pronounce (ē).

kh as in German *ach*, Scottish, *loch*. Pronounce a strongly aspirated (h) with the tongue in position for (k) as in *cool* or *keep*.

n This symbol indicates that the preceding vowel is nasal. The nasal vowels in French are œn̂ *(brun)*, an̂ *(main)*, än̂ *(chambre)*, ôn̂ *(dont)*. This symbol indicates that a preceding (l) or (r) is voiceless, as in French *débâcle* (dā·bä′kl') or *fiacre* (fyä′kr'), or that a preceding (y) is pronounced consonantly in a separate syllable followed by a slight schwa sound, as in French *fille* (fē′y').

Note on the accentuation of foreign words:

Many languages do not employ stress in the manner of English; only an approximation can be given of the actual situation in such languages. As it is not possible to reproduce the tones of Chinese in a work of this kind, Chinese names have been here recorded with primary stress on each syllable and may be so pronounced. Japanese and Korean have been shown without stress and may be pronounced with a level accent throughout. French words are shown conventionally with a primary stress on the last syllable; however, this stress tends to be evenly divided among the syllables (except for those that are completely unstressed), with slightly more force and higher pitch on the last syllable.

Synonyms: debase, degrade, depress, discredit, disgrace, dishonor, humble, humiliate, lower, reduce, sink. *Abase* generally refers to outward conditions, *debase* to quality or character: The coinage is *debased* by excess of alloy, the man by vice. *Humble* refers chiefly to the feelings, *humiliate* to outward conditions. To *disgrace* is chiefly applied to deserved moral odium: he *disgraced* himself by his conduct. To *dishonor* a person is to deprive him of honor that should or might be given. To *discredit* one is to injure his reputation. *Degrade* may refer to station, but is now chiefly used of character: drunkenness is a *degrading* vice. *Antonyms*: advance, aggrandize, dignify, elevate, exalt, honor, promote, raise, uplift.

a·bash (ə·bash′) *v.t.* To deprive of self-possession; disconcert; make ashamed or confused. [< OF *esbaïss-*, stem of *esbaïr* astonish] **—a·bash·ed·ly** (ə·bash′id·lē) *adv.* **—a·bash′ment** *n.*

Synonyms: bewilder, chagrin, confound, confuse, daunt, discompose, disconcert, dishearten, embarrass, humble, humiliate, mortify, overawe, shame. Any sense of inferiority *abashes,* with or without the sense of wrong. The poor are *abashed* at the splendor of wealth, the ignorant at the learning of the scholar. To *confuse* is to bring into a state of mental bewilderment; to *confound* is to overwhelm the mental faculties; to *daunt* is to subject to a certain degree of fear. Confusion generally refers to the intellect, embarrassment to the feelings. A witness may be *embarrassed* by annoying remarks or questions so as to become *confused* in statements. To *mortify* a person is to bring upon him a painful sense of humiliation: The parent is *mortified* by the child's rudeness, the child *abashed* at the parent's reproof. The *embarrassed* speaker finds it difficult to proceed. The mob is *overawed* by the military, the hypocrite *shamed* by exposure. See EMBARRASS. Compare CHAGRIN. *Antonyms*: animate, assure, buoy, cheer, embolden, encourage, inspirit, rally, uphold.

ab·a·tage (ab′ə·täj′) *n. Mil.* **1** Demolition; destruction, especially by high explosives. **2** The anchoring of a piece of artillery. [< F *abattage* < *abattre* demolish, knock down]

Synonyms: abate, abrogate, annihilate, annul, destroy, end, eradicate, exterminate, extirpate, nullify, obliterate, overthrow, prohibit, remove, repeal, reverse, revoke, subvert, supplant, suppress, terminate. *Abolish* is now used only of institutions, customs, and conditions, especially those wide-spread and long-existing; as, to *abolish* poverty. A building that is burned to the ground is said to be *destroyed* by fire. *Annihilate* signifies to put absolutely out of existence. Matter is never *annihilated,* but only changes its form. *Abolish* is not said of laws. There we use *repeal, abrogate, nullify,* etc.; *repeal* by the enacting body, *nullify* by revolutionary proceedings; a later statute *abrogates,* without formally *repealing,* any earlier law with which it conflicts. An appellate court may *reverse* or set aside the decision of an inferior court. *Overthrow* may be used in either a good or a bad sense; *suppress* is commonly in a good, *subvert* always in ■ bad sense; as to *subvert* our liberties; to *suppress* a rebellion. The law *prohibits* what may never have existed; it *abolishes* an existing evil. We *abate* a nuisance, *terminate* a controversy. Compare CANCEL, DEMOLISH, EXTERMINATE. *Antonyms:* authorize, cherish, confirm, continue, enact, establish, institute, introduce, legalize, promote, reinstate, renew, repair, restore, revive, support, sustain.

Synonyms: abhorrence, abuse, annoyance, aversion, crime, curse, detestation, disgust, evil, execration, hatred, horror, iniquity, nuisance, offense, plague, shame, villainy, wickedness. *Abomination* was originally applied to anything held in religious or ceremonial *aversion* or *abhorrence.* The word is now oftener applied to the object of such *aversion* or *abhorrence* than to the state of mind that so regards it; in common use *abomination* signifies something loathed, or that deserves to be. A toad is to many an object of *disgust;* a foul sewer is an *abomination. Antonyms:* affection, appreciation, approval, benefit, blessing, delight, desire, enjoyment, esteem, gratification, joy.

[OE *abufen*]

Above may appear as a combining form in hyphemes or solidemes, or as the first element in two-word phrases:

above all	**above measure**
above-cited	**above-mentioned**
above deck	**above-named**
above-given	**above-quoted**
aboveground	**above-said**
above-listed	**above-written**

Synonyms (prep.): on, over, upon. *Above* is the most inclusive of these prepositions. It can ordinarily be substituted for *on, upon,* or *over;* as, the boards were piled one *on* or *upon* another (one *above* another), the hawk flies *over* the wood (*above* the wood). But it will be seen that while *above* is more inclusive it is less definite; the boards laid one *on* another are in contact, but when laid one *above* another, they may not touch. *Over* often contains an intimation of extension or motion across, while *above* may simply imply greater elevation. If we say, the mountain towers *above* the plain, we think only of its height; but if we say, the mountain towers *over* the plain, we think of the plain as in the shadow of the mountain and dominated by it. So we say the mountain is 7,000 feet *above* the sea, where it would be impossible to say 7,000 feet *over* the sea. *Upon* is practically identical with *on,* preference being generally for euphonic reasons. *Antonyms*: see BENEATH.

ab·so·lute (ab′sə·lōōt) *adj.* **1** Free from restriction or relation; unlimited; independent; unconditional: an *absolute* monarchy. **2** Complete; perfect. **3** Unadulterated; pure. **4** Postive; entire; total; unquestionable. **5** *Gram.* Free from the usual relations of syntax or construction with other words in the sentence, as *It being late* in *It being late, we started home.* **b** Of a transitive verb, having no object expressed and, hence, functioning as intransitive, as *He writes well.* **c** Of an adjective standing without a noun, as *Only the brave deserve the fair.* **6** *Physics* Not dependent on any arbitrary standard; non-relative; specifically determined or measured only by the fundamental notions of space, mass, and time: *absolute* measurement; also, relating to the absolute-temperature scale: 15° *absolute.* —*n.* That which is absolute or perfect. —**the Absolute** The ultimate basis of all thought, reasoning, or being; God. [< L *absolutus*, pp. of *absolvere*. See ABSOLVE.] —**ab′so·lute′ness** *n.*

Synonyms (adj.): arbitrary, autocratic, despotic, infinite, perfect, pure, supreme, tyrannical, unconditional, unequivocal. As used of human authorities, *absolute* signifies free from limitation by other authority and *supreme* exalted over all other; as, an *absolute* monarch, the *supreme* court. As *absolute* power in human hands is usually abused, the unfavorable meaning of the word predominates. *Autocratic* power is *absolute* power self-established and self-maintained. *Despotic* is commonly applied to a masterful or severe use of power, which is expressed more decidedly by *tyrannical. Arbitrary* may be used in good sense; as, the pronunciation of proper names is *arbitrary;* but the bad sense is the prevailing one; as, an *arbitrary* proceeding, *arbitrary* power. Compare ARBITRARY, FLAT[1], IMPERIOUS, INFINITE, PERFECT. *Antonyms:* accountable, conditional, conditioned, constitutional, limited, responsible, restrained.

ab·stract (ab·strakt′, ab′strakt) *adj.* 1 Considered apart from the concrete; general, as opposed to particular. 2 Theoretical; ideal, as opposed to practical. 3 Considered or expressed without reference to particular example, as numbers, attributes, or qualities: 8 is an *abstract* number; Redness and valor are *abstract* nouns. 4 Withdrawn from contemplation of present objects; abstracted. 5 *Philos.* Dissociated from closely applied perceptions or ideas: *abstract* truth. 6 In art, generalized or universal, as opposed to concrete, specific, or representational; tending away from the realistic or literal.

—*n.* (ab′strakt) 1 A summary or epitome. 2 *Law* A compendium. 3 *Logic* An abstract idea or term. 4 *Gram.* An abstract noun. See under NOUN. 5 In pharmacy, the preparation of a drug in powder form. See synonyms under ABBREVIATION, ABRIDGMENT. —**in the abstract** Apart from concrete relation or embodiment; in its general reference or meaning; abstractly. —*v.t.* (ab·strakt′) 1 To take away; remove. 2 To take away secretly; purloin. 3 To withdraw or disengage (the attention, interest, etc.). 4 To consider apart from particular or material instances; form a general notion of: to *abstract* the idea of humanity from a crowd of men. 5 (ab′strakt) To make an abstract of, as a book or treatise; summarize; abridge. [<L *abstractus*, pp. of *abstrahere* <*ab-* away + *trahere* draw] —**ab·stract′er** *n.* —**ab·stract′ly** *adv.* —**ab·stract′ness** *n.*

Synonyms (verb): detach, disengage, divide, draw, purloin, remove, separate, steal, withdraw. The central idea of *withdrawing* makes *abstract* in common speech a euphemism for *purloin, steal.* In mental processes, we *separate* some one element from all that does not necessarily belong to it, *abstract* it, and view it alone. The mind is *abstracted* when it is *withdrawn* from all other subjects and concentrated upon one. *Antonyms*: add, increase, insert, interpose, restore, unite.

ab·stract·ed (ab·strak′tid) *adj.* 1 Absent-minded. 2 Separated from all else; apart; abstruse. —**ab·stract′ed·ly** *adv.* —**ab·stract′·ed·ness** *n.*

Synonyms: absent, absent-minded, absorbed, heedless, inattentive, oblivious, preoccupied. As regards mental action, *absorbed, abstracted,* and *preoccupied* refer to the cause, *absent* or *absent-minded* to the effect. The man *absorbed* in one thing will appear *absent* in others. The *absent-minded* man is *oblivious* of ordinary matters, because his thoughts are elsewhere. One who is *preoccupied* is intensely busy in thought; one may be *absent-minded* simply through inattention, with fitful and aimless wandering of thought. Compare ABSTRACT. *Antonyms*: alert, attentive, ready.

abstract idea A mental representation or concept that isolates and generalizes an aspect or quality of an object or of a group of experiences, from which relationships may be or are perceived.

Ae·o·li·an (ē·ō′lē·ən) *adj.* **1** Of or pertaining to ancient Aeolis in Asia Minor, its people, or their language; Aeolic. **2** Pertaining to Aeolus, Greek god of the winds. —*n.* **1** A member of one of the four major tribes of ancient Greece. The Aeolians settled in central Greece, Lesbos, and Aeolis. **2** Aeolic. Also spelled *Eolian.* Also **Æ·o′li·an.**

Aeolian harp A stringed instrument so constructed as to produce musical sounds when exposed to a current of air.

Aeolian Islands See LIPARI ISLANDS.

Ae·o·lic (ē·ol′ik) *n.* A dialect of ancient Greek spoken in Aeolis (including Lesbos), Thessaly, and Boeotia, represented by the poetry of Sappho and Alcaeus. —*adj.* Aeolian. Also spelled *Eolic.* Also **Æ·ol′ic.**

ae·ol·i·pile (ē·ol′ə·pīl) See EOLIPILE.

Ae·o·lis (ē′ə·lis) A country in ancient Greece and NW Asia Minor. Also **Æ′o·lis; Ae·o·li·a** (ē·ō′lē·ə).

ae·o·lo·trop·ic (ē′ə·lō·trop′ik) *adj. Physics* Anisotropic. [< Gk. *aiolos* varying + -TROPIC]

Ae·o·lus (ē′ə·ləs) **1** In Greek mythology, the god of the winds. **2** In Greek legend, a Thessalian king, son of Helen and ancestor of the Aeolians. Also **Æ′o·lus.**

ae·on (ē′ən, ē′on), **ae·o·ni·an** (ē·ō′nē·ən) See EON, etc.

Ae·qui·an (ē′kwē·ən) *n.* The Indo-European language of an early Italic people inhabiting Latium. [< L *Aequi*, pl.]

ae·quum (ē′kwəm) *n.* That quantity of food which is barely adequate to sustain an organism doing work. [< L < *aequus* even]

aer- Var. of AERO-.

ae·rar·i·an (ē·râr′ē·ən) *adj.* Fiscal; pertaining to the ancient Roman treasury. —*n.* A Roman citizen of the lowest rank, who had no right to vote, and paid only a poll tax. [< L *aerarius* < *aerarium* treasury < *aes, aeris* copper, money]

aer·as·the·ni·a (âr′əs·thē′nē·ə, ā′ər·əs-) *n.* Aeroneurosis. [< NL < AER- + Gk. *astheneia* weakness]

aer·ate (âr′āt, ā′ə·rāt) *v.t.* **·at·ed, ·at·ing** **1** To supply or charge with air or gas. **2** To purify by exposure to air. **3** To oxygenate, as blood. [< AER- + -ATE[2]] —**aer·a′tion** *n.*

aer·a·tor (âr′ā·tər, ā′ə·rā′tər) *n.* **1** An apparatus for charging liquids with gas under pressure. **2** A device for supplying a stream of gas or air, as for fumigating, destroying fungi, etc.

aer·en·chy·ma (âr·eng′kə·mə, ā′ə·reng′kə·mə) *n. Bot.* A specialized tissue serving in some aquatic plants for buoyancy and aeration, and consisting of thin-walled cells with intercellular air spaces.

aeri- Var. of AERO-.

aer·i·al (âr′ē·əl, ā·ir′ē·əl) *adj.* **1** Of or in the air. **2** Like air; atmospheric. **3** *Bot.* Grow-

ing or living in the air and not in the soil or in water. **4** Airy; insubstantial; spiritual. **5** Existing or performed in the air. **6** Of, by, or for aircraft: *aerial* bombardment. See synonyms under AIRY. —*n.* (âr′ē·əl) An antenna, as in television and radio. [< L *aerius* airy < *aer* air] —**aer′i·al·ly** *adv.*

aerial bomb See under BOMB.

aer·i·al·ist (âr′ē·əl·ist, ā·ir′ē·əl-) *n.* One who performs feats of skill in the air, as a tightrope walker, trapeze artist, etc.

aer·i·al·i·ty (âr′ē·al′ə·tē, ā·ir′ē-) *n.* Tenuity, or want of substance; airiness.

aerial ladder An extension ladder commonly mounted on a truck, and operated by levers: used by firemen in saving life or property.

aerial train An airplane towing behind it one or more gliders.

aer·ie (âr′ē, ir′ē) *n.* **1** The nest of a predatory bird, as the eagle, on a crag. **2** The brood or young of such a bird. Also spelled *aery, eyry, eyrie.* [< Med.L *aeria* < OF *aire,* ? < L *area* open space] —**aer′ied** *adj.*

aer·if·er·ous (âr·if′ər·əs, ā′ə·rif′-) *adj.* Containing or conveying air. [< AERI- + -FEROUS]

aer·i·fi·ca·tion (âr′ə·fi·kā′shən, ā′ər·ə-) *n.* **1** The act or process of converting into air, gas, or vapor; the process of becoming air, gas, or vapor. **2** Purification by exposure to air; aeration. Also **aer′i·fac′tion.**

aer·i·form (âr′ə·fôrm, ā′ər·ə·fôrm′) *adj.* Like air; gaseous; unsubstantial; intangible.

aer·i·fy (âr′ə·fī, ā′ər·ə·fī) *v.t.* **·fied, ·fy·ing** **1** To aerate. **2** To change into a gaseous form.

aero- *combining form* **1** Air; of the air: *aerobiology.* **2** Of aircraft or flying: *aeromarine.* **3** Gas; of gases: *aerogen.* Also *aer-, aeri-.* [< Gk. *aēr* air]

aer·o·al·ler·gen (âr′ō·al′ər·jən, ā′ər·ō-) *n.* An airborne substance that is capable of producing an allergenic response in a sensitized subject. —**aer′o·al·ler·gen′ic** *adj.*

aer·o·bal·lis·tics (âr′ō·bə·lis′tiks, ā′ər·ō-) *n.* The ballistics of missiles dropped, launched, or fired from aircraft in flight. —**aer′o·bal·lis′tic** *adj.*

aer·o·bat·ics (âr′ə·bat′iks, ā′ər·ə-) *n.* Aerial maneuvers which are not necessary to normal flight voluntarily performed in aircraft; trick or stunt flying. [< AERO- + (ACRO)BATICS]

aer·o·ba·tion (âr′ə·bā′shən, ā′ər·ə-) *n. Aeron.* The performance of aerial feats; stunt flying; exhibition flying.

aer·obe (âr′ōb, ā′ər·ōb) *n.* A microorganism that can live only in the presence of free oxygen: opposed to *anaerobe.* [< AERO- + Gk. *bios* life]

aer·o·bic (âr·ō′bik, ā·ə·rō′-) *adj.* **1** Living in air. **2** Pertaining to aerobics. —**aer·o′bi·cal·ly** *adv.*

aer·o·bics (âr·ō′biks) *n. pl.* A system of calisthenics and other strenuous physical activities designed to improve the functioning of the lungs and heart by speeding up oxygen consumption and circulation.

aer·o·bi·ol·o·gy (âr′ō·bī·ol′ə·jē, ā′ər·ō-) *n.* The study of the dispersal of airborne bacteria, pollen grains, fungal spores, etc., and of airborne pollutants having biological effects. —**aer′o·bi′o·log′i·cal** *adj.*

aer·o·bi·o·scope (âr′ō·bī′ə·skōp, ā′ər·ō-) *n.* An instrument for the determination of the bacterial content of air.

aer·o·car·to·graph (âr′ō·kär′tə·graf, -gräf, ā′·ər·ō-) *n.* A mapmaking device that utilizes air photographs to show the contour and elevation of ground features.

aer·o·cy·cle (âr′ə·sī′kəl, ā′ər·ə-) *n.* A flying machine constructed on the helicopter principle but intended to carry only one man at low altitude and over a short flight range.

aer·o·do·net·ics (âr′ō·də·net′iks, ā′ər·ō-) *n.* The branch of dynamics that treats of gliding and soaring flight. [< AERO- + Gk. *donētos* shaken < *donein* shake]

aer·o·drome (âr′ə·drōm, ā′ər·ə-) *n.* Airdrome.

aer·o·dy·nam·ics (âr′ō·dī·nam′iks, ā′ər·ō-) *n.* The branch of physics that treats of the laws of motion of gases, especially atmospheric, under the influence of gravity and other mechanical forces, and of the mechanical effects produced by such motion. —**aer′o·dy·nam′ic** *adj.*

aer·o·dyne (âr′ə·dīn, ā′ər·ə-) *n.* Any aircraft which is heavier than air, as an airplane, glider, helicopter, etc. [< AERO- + Gk. *dynamis* power]

aer·o·e·las·tic·i·ty (âr′ō·i·las′tis′ə·tē, ā′ər·ō-) *n. Eng.* The effect of aerodynamic forces on elastic materials and structures exposed to the wind, especially steel and other metals, aircraft, bridges, and buildings. —**aer′o·e·las′tic** *adj.*

aer·o·e·las·tics (âr′ō·i·las′tiks, ā′ər·ō-) *n.* The study of the elastic deformations in the structural elements of aircraft and of the aerodynamic conditions leading to the maximum stability and control of these elements. —**aer′o·e·las′tic** *adj.*

aer·o·em·bo·lism (âr′ō·em′bə·liz′əm, ā′ər·ō-) *n.* A bubble of air or other gas in the heart or in blood vessels. **2** Decompression sickness. Compare CAISSON DISEASE.

aer·o·foil (âr′ə·foil, ā′ər·ə-) *n.* Airfoil.

aer·o·gel (âr′ə·jel, ā′ər·ə-) *n.* A porous substance obtained from a gel by replacing the dispersed liquid phase with a gas.

aer·o·gen (âr′ə·jen, ā′ər·ə-) *n.* A microorganism that forms gas.

aer·o·gen·ic (âr′ə·jen′ik, ā′ər·ə-) *adj.* **1** Gas-producing: *aerogenic* bacteria. **2** Having the form of gas: *aerogenic* vaccine spray.

aer·o·gram (âr′ə·gram, ā′ər·ə-) *n.* **1** A wireless message; radiogram. **2** The record traced by a meteorograph.

aér·o·gramme (âr′ə·gram, ā′ər·ə-) *n.* An international airmail letter consisting of a single folded sheet: also, *Brit., air letter.* [< F]

aer·o·graph (âr′ə·graf, -gräf, ā′ər·ə-) *n.* A meteorograph.

aer·og·ra·pher (âr·og′rə·fər, ā′ə·rog′-) *n.* One skilled in aerography.

aer·og·ra·phy (âr·og′rə·fē, ā′ə·rog′-) *n.* A description of or treatise on the atmosphere and its phenomena. —**aer′o·graph′ic** or **·i·cal** *adj.* —**aer′o·graph′i·cal·ly** *adv.*

aer·o·hy·dro·plane (âr′ə·hī′drə·plān, ā′ər·ə-) See HYDROPLANE.

aer·o·lite (âr′ə·līt, ā′ər·ə-) *n.* A mass falling on the earth from celestial space and containing more stone than iron. See METEORITE. Also **aer′o·lith** (-lith). [< AERO- + Gk. *lithos* stone] —**aer′o·lit′ic** (-lit′ik) *adj.*

aer·ol·o·gy (âr·ol′ə·jē, ā′ə·rol′-) *n.* **1** *Physics* The science of the laws and phenomena of the atmosphere. **2** *Meteorol.* The study of the atmosphere in its vertical extent. —**aer·o·log·ic** (âr′ə·loj′ik, ā′ər·ə-) or **·i·cal** *adj.* —**aer·ol′o·gist** *n.*

aer·o·mag·net·ic (âr′ō·mag·net′ik, ā′ə·rō-) *adj.* Pertaining to magnetism in, or the action of magnetic force on, portions of the atmosphere, esp. the upper layers: an *aeromagnetic* survey.

aer·o·man·cy (âr′ə·man′sē, ā′ər·ə-) *n.* The art of divination or augury by atmospheric phenomena; hence, a forecasting of atmospheric changes. [< AERO- + Gk. *manteia* divination]

aer·o·ma·rine (âr′ō·mə·rēn′, ā′ər·ō-) *adj.* Pertaining to the navigation of aircraft over the ocean.

aer·o·me·chan·ics (âr′ō·mə·kan′iks, ā′ər·ō-) *n.* The science that treats of equilibrium and motion of air and gases, including *aerostatics* and *aerodynamics.* **2** Pneumatics. —**aer′o·me·chan′ic** *adj. & n.*

aer·o·med·i·cine (âr′ō·med′ə·sən, ā′ər·ō-) *n.* **1** Aviation medicine. **2** Space medicine. —**aer′o·med′i·cal** *adj.*

aer·o·me·te·or·o·graph (âr′ō·mē′tē·ôr′ə·graf, -gräf, ā′ər·ō-) *n.* A device for recording atmospheric conditions, as temperature, pressure and moisture, wind velocities, etc.

aer·om·e·ter (âr·om′ə·tər, ā′ə·rom′ə·tər) *n.* An apparatus for weighing and estimating the density of air or other gases.

aer·om·e·try (âr·om′ə·trē, ā′ə·rom′-) *n.* The science of weighing and measuring air and other gases. —**aer·o·met·ric** (âr′ə·met′rik, ā′ər·ə-) *adj.*

aer·o·naut (âr′ə·nôt, ā′ər·ə-) *n.* **1** One who navigates the air; a balloonist or aviator. **2** A space traveler. [< F *aéronaute* < Gk. *aēr* air + *nautēs* sailor]

aer·o·nau·tic (âr′ə·nô′tik, ā′ər·ə-) *adj.* **1** Pertaining to, floating in, or navigating the air. **2** Pertaining to aeronautics. Also **aer′o·nau′ti·cal.**

aer·o·nau·tics (âr′ə·nô′tiks, ā′ər·ə-) *n.* **1** The science or art of navigating aircraft. **2** That branch of engineering which deals with the design, construction, operation, and performance characteristics of aircraft.

aer·o·neu·ro·sis (âr′ō·nōō·rō′sis, -nyōōq-, ā′·ər·ō-) *n. Pathol.* A condition of nervous exhaustion sometimes affecting airplane pilots, characterized by emotional tension, irritability, gastric distress, and insomnia. Also called **aerasthenia, flying fatigue.**

aer·on·o·my (âr on′ə·mē, ā′ər·on′-) *n.* The scientific study of the physics and chemistry of the earth or other orbiting body. —**aer′o·nom′ ·i·cal** *adj.*

aer·o·pause (âr′ə·pôz, ā′ər·ə-) *n. Meteorol.* The region of the atmosphere where the conditions of outer space are gradually approached: it is believed to extend from about 12 to 125 miles above the earth.

aer·o·pha·gi·a (âr′ə·fā′jē·ə, ā′ər·ə-) *n. Med.* The swallowing of air.

aer·o·phi·lat·e·ly (âr′ō·fi·lat′ə·lē, ā′ər·ō-) *n.* The collecting of air-mail stamps, covers, etc. —**aer′o·phi·lat′e·list** *n.*

aer·o·phobe (âr′ə·fōb, ā′ər·ə-) *n.* A person or organism evincing or affected by aerophobia.

aer·o·pho·bi·a (âr′ə·fō′bē·ə, ā′ər·ə-) *n.* **1** A morbid fear of fresh air and of airborne infection. **2** A morbid fear of flying. **3** *Biol.* Movement of an organism away from air or oxygen.

aer·o·phore (âr′ə·fôr, ā′ər·ə-) *n.* **1** An apparatus for inflating the lungs of a newborn infant to stimulate breathing. **2** A device for delivering air as needed to firemen, aviators, etc.

aer·o·pho·tog·ra·phy (âr′ō·fə·tog′rə·fē, ā′ər·ō-) *n.* Photography from aircraft.

aer·o·phys·ics (âr′ō·fiz′iks, ā′ər·ō-) *n.* Physical science considered with reference to the design, construction, and operation of aircraft, rockets, guided missiles, etc.: the physics of aeronautics and aviation.

aer·o·phyte (âr′ə·fīt, ā′ər·ə-) *n. Bot.* An epiphyte (def. 1).

aer·o·plane (âr′ə·plān, ā′ər·ə-) See AIRPLANE.

aer·o·scope (âr′ə·skōp, ā′ər·ə-) *n.* An instrument for collecting the minute particles in the atmosphere for microscopic examination. —**aer′o·scop′ic** (-skop′ik) *adj.*

aer·o·sid·er·ite (âr′ō·sid′ə·rit, ā′ər·ō-) *n.* A meteorite of which iron is the chief constituent.

aer·o·sid·er·o·lite (âr′ō·sid′ər·ə·līt′, ā′ər·ō-) *n.* A meteorite that is both metallic and stony.

aer·o·sol (âr′ə·sōl, -sol, ā′ər·ə-) *n.* **1** A colloidal dispersion of solid or liquid particles in a gaseous medium. **2** A substance packaged under pressure along with a volatile propellant which, upon release through a nozzle, disperses fine particles of the substance in the air. —*adj.* Pertaining to, resembling, dispensing, or dispensed as an aerosol. Also **aer′o·sol′ic.** [< AERO- + SOL(UTION)]

aer·o·sol·ize (âr′ə·sol·iz, ā′ər·ə-) *v.t.* **·ized, ·iz·ing** To package with a propellant under pressure for dispersion as an aerosol. —**aer′o·sol′i·za′tion** *n.*

aer·o·space (âr′ō·spās, ā′ər·ō-) *n.* **1** The earth's atmosphere and outer space, considered as a single region in the operation of rockets, guided missiles, and spacecraft. **2** The study and investigation of this region, especially with reference to space travel.

aer·o·sphere (âr′ə·sfir, ā′ər·ə-) *n.* The entire atmosphere considered as a single gaseous shell surrounding the earth.

aer·o·stat (âr′ə·stat, ā′ər·ə-) *n.* Any aircraft which is lighter than air, as a balloon or dirigible. [< F *aérostat* < Gk *aēr* air + *statos* standing] —**aer′o·stat′ic** or **·i·cal** *adj.*

aer·o·stat·ics (âr′ə·stat′iks, ā′ər·ə-) *n.* **1** The branch of physics that treats of the mechanical properties of air and gases not in motion. **2** The art and science of operating lighter-than-air aircraft, as balloons and dirigibles: distinguished from *aviation.*

aer·o·sta·tion (âr′ə·stā′shən, ā′ər·ə-) *n.* **1** The art of raising and supporting bodies, as balloons, by means of fluids lighter than air: opposed to *aviation.* **2** *Obs.* Aerostatics. Compare AEROSTATICS.

aer·o·tax·is (âr′ə·tak′sis, ā′ər·ə-) *n. Biol.* Movement of an organism away from or toward a source of air or oxygen.

aer·o·ther·a·peu·tics (âr′ō·ther′ə·pyōō′tiks, ā′·ər·ō-) *n. Med.* A system of treating disease by varying the atmospheric pressure upon the patient or by changing the composition of the air. Also **aer′o·ther′a·py** (-ther′ə·pē).

aer·o·ther·mo·dy·nam·ics (âr′o·thûr′mō·dinam′iks, ā′ər·ō-) *n.* The branch of thermodynamics that deals with the relations between heat and mechanical energy in gases, especially in their applications to changes induced by the motions of bodies in the medium.

aer·o·tow (âr′ə·tō′, ā′ər·ə-) *v.t.* To tow (a glider or other aircraft) through the air. —*n.* The towing of an aircraft in this manner.

aer·ot·ro·pism (âr·ot′rə·piz′əm, ā′ə·rot′-) *n. Biol.* A change in orientation of a plant affected by differential growth of tissues in response to the presence of air or oxygen. —**aer·o·trop·ic** (âr′ə·trop′ik, ā′ər·ə-) *adj.*

ae·ru·gi·nous (i·rōō′jə·nəs) Resembling verdigris; bluish green. Also spelled *eruginous.* [< Latin *aerugo* < *aes* brass, copper]

aer·y[1] (âr′ē, ā′ər·ē) *adj.* Airy; aerial.

aer·y[2] (âr′ē, ir′ē) See AERIE.

æs (ēz) *n.* Money made of copper or bronze. [< L]

Aes·chi·nes (es′kə·nēz), 389–314 B.C., Athenian orator; rival of Demosthenes. Also **Æs′chi·nes.**

Aes·chy·le·an (es′kə·lē′ən) *adj.* Similar to, or in the style of, the tragedies of Aeschylus; hence, majestic; stately. Also **Æs′chy·le′an.**

Aes·chy·lus (es′kə·ləs), 525–456 B.C., Greek tragic dramatist. Also **Æs′chy·lus.**

Aes·cu·la·pi·an (es′kyə·lā′pē·ən) *adj.* Relating to Aesculapius; hence, pertaining to the art of healing; medical. —*n.* A disciple of Aesculapius; hence, a physician. Also spelled *Esculapian.*

Aes·cu·la·pi·us (es′kyə·lā′pē·əs) In Roman mythology, the god of medicine: identified with the Greek *Asclepius.* Also **Æs′cu·la′pi·us.**

Æ·sir (ā′sir, ē′-) *sing.* As The gods of the Teutonic pantheon collectively. See VAN[2].

Ae·sop (ē′səp, ē′sop) Greek author of fables, sixth century B.C. Also **Æ′sop.**

Ae·so·pi·an (ē·sō′pē·ən) *adj.* **1** Of or pertaining to Aesop; resembling the fables of Aesop. **2** Cryptic; phrased in figurative language or fable to carry a special meaning to the initiated: also spelled *Esopian.* Also **Æ·so′pi·an.**

aes·thete (es′thēt), **aes·thet·ic** (es·thet′ik) See ESTHETE, etc.

ae·ta·tis su·ae (ē·tā′tis sōō′ē) *Latin* Of his (or her) age; at a specified age. Also **æ·ta′tis su′æ.**

Æth·el·bert (ath′əl·bûrt) See ETHELBERT.

æth·el·ing (ath′əl·ing) See ATHELING.

Æth·el·red (ath′əl·red) See ETHELRED.

Ae·thi·o·pi·a (ē′thē·ō′pē·ə) See ETHIOPIA.

ae·thri·o·scope (ē′thrē·ə·skōp′) *n.* A thermometric instrument for measuring minute changes in the heat radiated from the sky. [< Gk. *aithria* clear sky + -SCOPE]

A·e·tian (ā·ē′shən) *n.* One of the party of extreme Arians that flourished in the latter half of the fourth century: so called from its leader, Aetius of Antioch.

Aet·na (et′nə) See ETNA. Also **Æt′na.**

Ae·to·li·a (ē·tō′lē·ə) A district of western Greece, part of modern Acarnania. Also **Æ·to′li·a.** *Greek* **Ai·to·li·a** (âi′tō·lē′ä). —**Ae·to′li·an,** *adj. & n.*

af- Assimilated var. of AD-.

a·far (ə·fär′) *adv.* At, from, or to a distance; remotely. [< A-[1] on + FAR]

a·feard (ə·firdʹ) *adj. Dial.* Afraid; fearful. Also **a·feared′.**

a·fe·brile (ā·fē′brəl, ā·feb′rəl) *adj.* Free from fever.

aff (af) *adv. & prep. Scot.* Off; off from.

af·fa·ble (af′ə·bəl) *adj.* **1** Easy and courteous in manner; approachable. **2** Benign; mild. See synonyms under BLAND, FRIENDLY. [< F < L *affabilis,* lit., able to be spoken to < *affari* < *ad-* to + *fari* speak] —**af′fa·bil′i·ty, af′fa·ble·ness** *n.* —**af′fa·bly** *adv.*

af·fair (ə·fârʹ) *n.* **1** Anything done or to be done; business; concern: often in plural. **2** An unimportant event, as a skirmish; matter; thing. **3** A vague or indefinite object or fact: The first ship was a rude *affair.* **4** See LOVE AFFAIR. See synonyms under BATTLE, BUSINESS, TRANSACTION. [< OF *afaire* < *a faire* to do < L *ad* to + *facere* do]

af·faire (à·fârʹ) *n. French* Short for **affaire d'a·mour** (dà·mōōrʹ), a love affair, or **affaire de coeur** (də kœrʹ), affair of the heart.

af·faire d'hon·neur (à·fârʹ dô·nœrʹ) *French* A matter of honor; a duel.

af·fect[1] (ə·fektʹ) *v.t.* **1** To act upon or have an effect upon; impress; influence. **2** To touch or move emotionally. **3** To attack or attaint: A disease *affects* the body. See synonyms under CONCERN, INFLUENCE. Compare EFFECT. — *n.* **1** (afʹekt) *Psychol.* **a** That which tends to arouse emotion rather than to stimulate thought or perception. **b** The diffuse mental condition thus produced. **c** The fundamental controlling element in an emotional state. **2** *Obs.* Inward disposition; inclination. [< L *affectus,* pp. of *afficere* influence, attack < *ad-* to + *facere* do; def 1 of noun < G *affekt*]

af·fect[2] (ə·fektʹ) *v.t.* **1** To have a liking for; show a preference for; fancy: to *affect* large hats. **2** To imitate or counterfeit for effect; make a show of one's liking or aptitude for: to *affect* a British accent; to *affect* omniscience. **3** To tend toward naturally; haunt; frequent: said of animals and plants. **4** *Obs.* To aim at; to aspire for or to. See synonyms under ASSUME, LIKE, PRETEND. [< F *affecter* < L *affectare* aim at, freq. of *afficere.* See AFFECT[1].]

af·fec·ta·tion (afʹek·tāʹshən) *n.* **1** A studied pretense; shallow display: with *of:* an *affectation* of wealth. **2** Artificiality of manner or behavior; affectedness. See synonyms under HYPOCRISY, PRETENSE. [< L *affectatio, -onis* < *affectare.* See AFFECT[2].]

af·fect·ed[1] (ə·fekʹtid) *adj.* **1** Acted upon, as by a drug. **2** Moved emotionally; influenced. **3** Attacked, as by disease; diseased. **4** *Math.* Affected. [pp. of AFFECT[1]]

af·fect·ed[2] (ə·fekʹtid) *adj.* **1** Assumed falsely or in outward semblance only; showing affectation. **2** Having a liking, inclination, or affection; inclined. **3** Fondly cherished; loved; frequented. See synonyms under FACTITIOUS, SQUEAMISH. [pp. of AFFECT[2]] —**af·fect′ed·ly** *adv.* —**af·fect′ed·ness** *n.*

af·fect·er (ə·fekʹtər) *n.* One who affects or pretends.

af·fect·ing[1] (ə·fekʹting) *adj.* Having power to move the feelings; pathetic. —**af·fect′ing·ly** *adv.*

af·fect·ing[2] (ə·fekʹting) *adj. Obs.* **1** Showing love. **2** Pretending; falsely displaying.

af·fec·tion (ə·fekʹshən) *n.* **1** *Often pl.* Good disposition, as towards another; fond attachment; kind feelings: usually distinguished from *love* as less powerful or intense. **2** *Often pl.* A mental state brought about by any influence; an emotion or feeling: to influence men by playing on their *affections.* **3** An abnormal state of the body; disease. **4** The act of affecting or influencing or the state of being influenced. **5** A property or attribute: Thought is said to be an *affection* of matter. **6** *Psychol.* Conscious perception of feeling or emotion: distinguished from *cognition.* **7** *Obs.* Constitutional inclination; tendency. See synonyms under ATTACHMENT, FRIENDSHIP, LOVE, INFLUENCE, DISEASE.

af·fec·tion·al (ə·fekʹshən·əl) *adj.* Of or pertaining to affections. —**af·fec′tion·al·ly** *adv.*

[OE *on life* in life]

Synonyms: active, alert, animate, animated, breathing, brisk, existent, existing, live, lively, living, quick, subsisting, vivacious. *Alive* applies to all degrees of life, from that which shows one to be barely *existing* or *existent* as a living thing, as when we say he is barely *alive,* to that which implies the utmost of vitality and power. So the word *quick,* which began by signifying "having life," is now mostly applied to energy of life as shown in swiftness of action. *Breathing* is capable of like contrast. We say of a dying man, "he is still *breathing*"; or we speak of a *breathing* statue, where we mean having, or seeming to have breath and life. Compare ACTIVE, ALERT, NIMBLE. *Antonyms*: dead, deceased, defunct, dispirited, dull, inanimate, lifeless, spiritless.

a·liz·a·rin (ə·liz′ə·rin) *n.* A basic orange-red crystalline coloring compound, $C_{14}H_8O_4$; used to dye cotton, wool, and silks various shades of red: formerly prepared from madder, now manufactured from anthraquinone. —*adj.* Designating any organic compound derived from anthraquinone: *alizarin* blue, *alizarin* crimson, *alizarin* green. In each column the characters of the alphabet are given first, followed by the names of the characters in Arabic, Hebrew, and Greek. The last row in each column shows the approximate English sound represented by each character. Columns 3, 4, and 5 show the upper- and lower-case forms. The Arabic characters are given in their final, unconnected forms. The German style of letter, called *fraktur*, has, since the 1880's, been gradually replaced in German printing by the Latin letter.

[1] Functions as the bearer of hamza (the glottal stop), or as a lengthener of short *a*. [2] A voiced pharyngeal fricative. [3] A voiced velar fricative. [4] A uvular stop. [5] A voiceless velar stop. [6] A glottal stop, now usually silent, or pronounced according to the accompanying vowel points. [7] A pharyngeal fricative, now usually silent, or pronounced according to the accompanying vowel points. [8] The alternate form is restricted to the ends of words. [9, 10, 11] In classical Greek these were pronounced as aspirated stops similar to the sounds in foo*th*ill, ha*ph*azard, and bloc*kh*ouse. [12] Appears only as the second vowel in a diphthong. [13] Formerly, a sign of non-palatalization of consonants at the ends of words; since 1918, used only between two syllables to indicate that they are separately pronounced. [14] A sign of palatalization of a preceding consonant.

-ance *suffix of nouns* Forming nouns of action, quality, state, or condition from adjectives in *-ant,* and also directly from verbs, as in abundance, resistance, forbearance. Compare -ANCY. [< F *-ance* < L *-antia, -entia,* a suffix used to form nouns from present participles; or directly from Latin]

◆ **-ance, -ence** The modern spelling of words in this group is unpredictable. The confusion arose originally in borrowings from Old French *(resistance, assistance)* where *-ance* had come to represent Latin *-entia,* as well as *-antia.* Since 1500, however, some of these have been altered back to *-ence* on the Latin model, as in the case of *dependence,* earlier *dependance.* Later Latin borrowings in French and in English (through French or directly from Latin) discriminate between *-ance* and *-ence* according to the vowel of the Latin original.

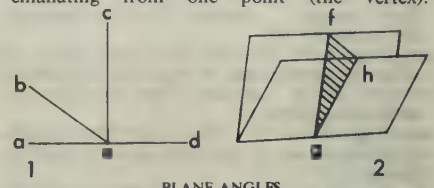
an·gle[2] (ang′gəl) *n.* 1 *Geom.* a The figure formed by the meeting of two lines or of two or more surfaces; corner; point. b The figure, concept, or relation of two straight lines (sides) emanating from one point (the vertex).



PLANE ANGLES

c The figure formed by the intersection of two straight lines or of two or more planes. See list of geometric angles below. 2 A secluded place resembling a corner; nook. 3 The point of view or aspect from which any object, question, or situation may be regarded. —**critical angle** 1 The least angle of incidence at which a ray is totally reflected. 2 *Aeron.* The angle of attack at which the airflow striking the under surface of an airplane changes abruptly, causing similar changes in lift and drag. —**gliding angle** *Aeron.* The angle the flight path of an airplane makes with the horizontal when flying in still air under the influence of gravity alone. —*v.* **an·gled, an·gling** *v.t.* 1 To move or turn at an angle or by angles: to *angle* a ball to avoid a hazard. 2 *Colloq.* To impart a particular bias or interpretation, as to a story or report. —*v.i.* 3 To proceed or turn itself at an angle or by angles: The road *angled* up the hill. [< F < L *angulus* a corner, angle]

PRINCIPAL GEOMETRIC ANGLES

—**acute angle** An angle less than a right angle.

—**adjacent angle** An angle having a common side with another angle and the same vertex.

—**alternate angle** Either of two non-adjacent interior or exterior angles formed on opposite sides of a line which crosses two other lines.

—**central angle** An angle whose vertex is the center of a circle and whose sides are radii.

—**complementary angle** One of two angles whose sum is a right angle.

—**conjugate angle** Either of two angles whose sum is a perigon.

—**dihedral angle** The relation of two intersecting planes, as measured by the difference in direction of perpendiculars to them.

—**exterior angle** 1 Any of four angles formed on the outside of two straight lines cut by a third line. 2 The angle formed between any side of a polygon and the extension of an adjacent side.

—**interior angle** 1 One of the four angles formed between two straight lines cut by a third line. 2 The angle formed in the interior of a polygon by two adjacent sides.

—**obtuse angle** An angle greater than a right angle.

—**plane angle** An angle made by lines lying in one plane.

—**reflex angle** An angle greater than a straight angle.

—right angle An angle whose sides are perpendicular to each other; an angle of 90°.
—solid angle The angle formed at the vertex of a cone or subtended at the point of intersection of three or more planes; equal to 4π steradians.
—spherical angle The angle formed at the intersection of two great circles on a sphere: its value is a measure of the difference in direction of the arcs of the intersecting circles.
—straight angle An angle of 180°, generated by two straight lines extending in opposite directions from the vertex.
—supplementary angle One of two angles whose sum is a straight angle.

An·gle (ang′gəl) *n.* **1** A member of a Germanic tribe which migrated from southern Denmark to Britain in the fifth and sixth centuries and founded the kingdoms of East anglia, Mercia, and Northumbria. **2** A national of any of the kingdoms in the parts of Britain settled by this tribe: from its descendants the country came to be called England (Angle-land). as·sume (ə·sōōm′) *v.t.* **as·sumed, as·sum·ing** **1** To take up or adopt, as a style of dress, aspect, or character: to *assume* a haughty mien. **2** To undertake, as an office or duty. **3** To arrogate to oneself; usurp, as powers of state. **4** To take for granted; suppose to be a fact: to *assume* the sun will shine tomorrow. **5** To affect; pretend to have. [<L *assumere* take up, adopt < *ad-* to + *sumere* take] — **as·sum·a·ble** (ə·sōō′mə·bəl) *adj.*

Synonyms: accept, affect, appropriate, arrogate, claim, feign, postulate, presume, pretend, take, usurp. The distinctive idea of *assume* is to *take* by one's own independent volition, whether well or ill, rightfully or wrongfully. One may *accept* an obligation or *assume* an authority that properly belongs to him; if he *assumes* what does not belong to him, he is said to *arrogate* or *usurp* it. A man may *usurp* the substance of *power* in the most unpretending way; what he *arrogates* to himself he *assumes* with a haughty and overbearing manner. If he *takes* to himself the credit and appearance of qualities he does not possess, he is said to *affect* or *feign*, or to *pretend* to, the character he thus *assumes*. What a debater *postulates* he openly states and *takes* for granted without proof; what he *assumes* he may *take* for granted without mention. What a man *claims* he asserts his right to *take;* what he *assumes* he *takes*. See PRETEND. *Antonyms*: see synonyms for RENOUNCE.

at·om (at′əm) *n.* **1** *Chem.* The smallest part of an element capable of existing alone or in combination and which cannot be changed or destroyed in any chemical reaction: an *atom* of sulfur, carbon, etc.: distinguished from *molecule.* **2** *Physics* The electrically neutral combination of a nucleus and its complement of electrons to form a relatively stable, distinguishable unit, regarded as a unitary system. **3** A hypothetical entity admitting of no division into smaller parts. **4** An exceedingly small quantity or particle; iota. [< L *atomus* < Gk. *atomos* indivisible < *a-* not + *temnein* cut]

a·tom·ic (ə·tom′ik) *adj.* **1** Of or pertaining to an atom or atoms: also **a·tom′i·cal.** **2** Very minute; infinitesimal. **3** Of, characterized by or employing atomic energy: an *atomic* power plant. — **a·tom′i·cal·ly** *adv.*

atomic age The era characterized by the use and growing importance of atomic energy as a factor in human and social development. Also **Atomic Age.**

atomic bomb See under BOMB. Also **atom bomb.**

atomic clock A high-precision instrument for the measurement of time by a constant frequency associated with a selected line in the spectrum of ammonia gas or other suitable vibrator.

atomic energy The energy contained within the nucleus of the atom; especially, such energy when made available for human use by controlled nuclear fission or thermonuclear reactions.

Atomic Energy Commission A U.S. board formed in 1946 for the domestic control of atomic energy.

at·o·mic·i·ty (at′ə·mis′ə·tē) *n. Chem.* **1** The number of atoms in a molecule. **2** Valence. **3** In the molecule of a compound, the number of replaceable atoms or groups.

atomic mass unit *Physics* **1** A unit arbitrarily defined as $^1/_{12}$ the mass of an atom of the carbon isotope of mass 12; a dalton. Abbr. *amu*

atomic number *Physics* A number which represents the unit positive charges (protons) in the atomic nucleus of each element and corresponds to the number of extra-nuclear electrons. Hydrogen is assigned an atomic number of 1; on this basis, carbon is 6, oxygen 8, iron 26, gold 79, etc.

atomic philosophy The philosophy, anciently expounded by Democritus, Epicurus, and Lucretius, which attempts to account for all material existence, or for the entire universe, as being composed of simple, indivisible atoms.

atomic pile Reactor.

atomic power Atomic energy as a source of power.

atomic structure *Physics* **1** The configuration of the atom. **2** The arrangement of atoms in a molecule or in bulk matter.

atomic submarine A nuclear submarine.

atomic theory **1** *Chem.* The doctrine that elements unite with one another, atom by atom, and in definite simple proportions by weight. **2** *Physics* The concept that all bulk matter is composed of atoms, and that the properties of matter are ultimately to be understood in terms of the properties and interactions of the component atoms.

atomic weight *Chem.* Since 1961, the weight of an atom of an element relative to that of an atom of carbon, taken as 12.01115. **b** Formerly, the weight of an atom of an element relative to that of an atom of oxygen, taken as 16.

at·om·ism (at′əm·iz′əm) *n.* **1** The atomic philosophy. **2** The atomic theory. —**at′om·ist** *n.* — **at′om·is′tic** or **·ti·cal** *adj.*

at·om·ize (at′əm·īz) *v.t.* **·ized, ·iz·ing** **1** To reduce to or separate into atoms; pulverize. **2** To spray or reduce to a spray, as by an atomizer. Also *Brit.* **at′om·ise.** —**at′om·i·za′tion** *n.*

at·om·iz·er (at′əm·ī′zər) *n.* **1** An apparatus for reducing a liquid, especially medicine or perfume, to a spray.

at·om·me·ter (at′əm·mē′tər) *n.* The angstrom unit.

at·om·ol·o·gy (at′əm·ol′ə·jē) *n.* The study of atoms.

at·o·my[1] (at′ə·mē) *n. pl.* **·mies** *Archaic* **1** An atom. **2** A pigmy. [< L *atomi,* pl. of *atomus* atom]

at·o·my[2] (at′ə·mē) *n. pl.* **·mies** *Obs.* A skeleton or an emaciated person. [< ANATOMY (misunderstood as *an atomy*)]

a·to·nal (ā·tō′nəl) *adj. Music* Without tonality; lacking key. —**a·to′nal·ly** *adv.*

a·to·nal·ism (ā·tō′nəl·iz′əm) *n.* The theory of atonally composed music. —**a·to′nal·is′tic** *adj.*

a·to·nal·i·ty (ā′tō·nal′ə·tē) *n. Music* Lack of tonality; absence of key.

a·tone (ə·tōn′) *v.* **a·toned, a·ton·ing** *v.i.* **1** To make an expiation, as for sin or a sinner; make amends, reparation, or satisfaction. **2** *Obs.* To be at one, agree, —*v.t.* **3** *Rare* To expiate. **4** *Obs.* To propitiate; reconcile. bend¹ (bend) *v.* **bent** (*Archaic* **bend·ed**), **bend·ing** *v.t.* **1** To cause to take the form of a curve; crook; bow. **2** To direct or turn, as one's course, in a certain direction; deflect. **3** To subdue; cause to yield, as to one's will. **4** To apply closely; concentrate, as the mind. **5** *Naut.* To tie; make fast, as a rope; place in position, as a sail. **6** *Archaic* To strain; make tense: with *up*. — *v.i.* **7** To assume the form of a bow. **8** To take a certain direction. **9** To bow in submission or respect; yield; conform. **10** To apply one's energies: with *to*. — *n.* **1** A curve or crook. **2** An act of bending or bowing. **3** A loop or knot by which a rope is fastened to any object. **4** A wale or rib. **5** *Scot.* A deep draft. [OE *bendan*]

Synonyms (verb): bias, crook, curve, deflect, deviate, diverge, incline, influence, mold, persuade, stoop, submit, turn, twine, twist, warp, yield. In some cases a thing is spoken of as *bent* where the parts make an angle; but oftener to *bend* is understood to be to draw to or through a curve; as, to *bend* a bow. To *submit* or *yield* is to *bend* or surrender to

another's wishes. To *incline* or *influence* is to *bend* another's wishes toward our own; to *persuade* is to draw them quite over. To *warp* is to *bend* slightly through the whole fiber, as a board in the sun. To *crook* is to *bend, turn,* or *twist* irregularly. *Deflect, deviate,* and *diverge* are said of any turning away from a direct line; *deviate* commonly of a slight and gradual movement, *diverge* of a more sharp and decided one. To *bias* is to influence feeling, opinion, or action in the direction of some prevailing (often unconscious) tendency; personal enmity against the accused will *bias* a witness or a juror so as to distort his view of the facts or motives involved in the case. *Mold* is a stronger word than *bend*; we may *bend* by a superior force that which resists the constraint; as, *bend* a bow; we *mold* something plastic entirely and permanently to some desired form. See TWIST.

Synonyms: almsgiving, beneficence, benignity, bounty, charity, generosity, humanity, kindheartedness, kindliness, kindness, liberality, munificence, philanthropy, sympathy. Originally *beneficence* was the doing well, *benevolence* the wishing or willing well to others; but *benevolence* has come to include *beneficence* and to displace it. *Charity* is now almost universally applied to some form of *almsgiving* and is much more limited in meaning than *benevolence. Benignity* suggests some occult power of blessing, such as was formerly ascribed to the stars; we may say a good man has the air of *benignity. Kindness* and *tenderness* are personal; *benevolence* and *charity* are general. *Humanity* is *kindness* and *tenderness* toward man or beast. We speak of the *bounty* of a generous host, the *liberality* or *munificence* of the founder of a college, or of the *liberality* of a person toward holders of conflicting beliefs. *Philanthropy* applies to wide schemes for human welfare, often, but not always, involving large expenditures in *charity* or *benevolence.* Compare MERCY. *Antonyms*: barbarity, brutality, churlishness, greediness, harshness, illiberality, inhumanity, malevolence, malignity, niggardliness, selfishness, self-seeking, stinginess, unkindness.
